Abdujabbar Rasulov,Gulnora Raimova,2011-07 Availability of multiprocessor computers allows us to solve many complex problems using Monte Carlo method Monte Carlo methods have been further developed to solve a variety of multidimensional integrals linear and nonlinear boundary value problems In monograph we used the deep connections between differential equations and random processes This connection has been known long ago the results of the theory of differential equations have been widely used in the theory of probability and vice versa The solutions of large class linear and nonlinear equations of elliptic and parabolic type may be represented in the form of integrals over the trajectories of Markov process In the current work we study the approaches connected with simple and branching Markov processes We obtained effective unbiased estimators for the solutions Constructed numerical algorithms are strict proved and used for the solution of problems of mathematical physics This book meant for specialists of numerical methods who applied Monte Carlo methods for the solution boundary value problems calculating multidimensional integrals and work in the area financial mathematics and statistics **Monte Carlo Methods for Solution Linear and Nonlinear Boundary Value Problems** Abdujabbor S.

Rasulov,M. Mascagni,G. Raimova,Zhahon iqtisodiëti va diplomatii□a□ universiteti (Tashkent, Uzbekistan),2006 **Monte Carlo Methods For Applied Scientists** Ivan Tomov Dimov,2007-12-21 The Monte Carlo method is inherently parallel and the extensive and rapid development in parallel computers computational clusters and grids has resulted in renewed and increasing interest in this method At the same time there has been an expansion in the application areas and the method is

now widely used in many important areas of science including nuclear and semiconductor physics statistical mechanics and heat and mass transfer This book attempts to bridge the gap between theory and practice concentrating on modern algorithmic implementation on parallel architecture machines Although a suitable text for final year postgraduate mathematicians and computational scientists it is principally aimed at the applied scientists only a small amount of mathematical knowledge is assumed and theorem proving is kept to a minimum with the main focus being on parallel algorithms development often to applied industrial problems A selection of algorithms developed both for serial and parallel machines are provided
