**Cardiovascular Disease in Companion Animals** Wendy A. Ware, John D.

Bonagura, 2021-06-17 Note that the supplementary electronic material for Chapters 26-40 will be available in the Support Material tab soon. This new edition of *Cardiovascular Disease in Companion Animals* authored by two leading experts in the field now covers the horse as well as the dog and cat. The comprehensive, superbly illustrated book has been completely revised and expanded from the original *Cardiovascular Disease in Small Animal Medicine*. Five key sections provide clearly written overviews of normal cardiovascular structure and function, pathophysiologic derangements and their manifestations, clinical cardiology testing and interpretation, and extensive guidance for cardiovascular disease diagnosis and management. A broad collection of clinical images, graphics, tables, diagrams, and a Summary Drug Tables for each species enhances the book's utility as a practical clinical resource. Up-to-date references support the focus on cardiovascular diseases and reflect important developments in veterinary cardiology and practice. A valuable companion website contains videos and additional images to enhance each chapter. Since first publication in 2007, Dr. Ware's authoritative yet user-friendly guide to cardiovascular diseases in veterinary practice has been widely praised. This book contains even more illustrations of the highest quality. Coverage also includes diagnostic considerations for various clinical problems, procedures and techniques for patient evaluation, and detailed management strategies for congestive heart failure, arrhythmias, and other complications of cardiovascular disease. This second edition is a must-have for veterinary practitioners, students, interns, residents, and others with an in-depth interest in veterinary cardiology.

*Advances in Cardiopulmonary Rehabilitation* Jean Jobin, 2000. In recent years, research has demonstrated that exercise programs can benefit patients with chronic obstructive pulmonary disease (COPD) and patients with congestive heart failure (CHF). Yet many physicians do not refer such patients to any kind of exercise or rehabilitation program. *Advances in Cardiopulmonary Rehabilitation* examines the history of how pulmonary and cardiac diseases have been treated and shows how that history tends to constrain contemporary thinking in spite of significant advances in treatment. Why do only a small percentage of eligible patients enroll in cardiopulmonary rehab programs? What percentage of patients can be helped and in what ways? What are the most cost-efficient allocations of scarce financial resources for cardiac and pulmonary patients? The contributors to this book address these questions and provide answers that are challenging and often quite surprising. The First Quebec International Symposium on Cardiopulmonary Rehabilitation was held in Quebec City in May 1999, bringing together experts from around the world to discuss every aspect of cardiopulmonary rehabilitation. Editors Jean Jobin, PhD, Francois Maltais, MD, Pierre LeBlanc, MD, and Clermont Simard, PhD, selected the most groundbreaking papers presented at the conference and expanded on several of them for this reference. The book offers review articles and some original research. The editors' comprehensive introduction and conclusion provide an invaluable synthesis and overview of current understanding and future directions for cardiopulmonary rehabilitation. Whether you are a clinician, a researcher, an educator, or an administrator, *Advances in Cardiopulmonary Rehabilitation* will give you an

understanding of how trends in cardiopulmonary rehabilitation during the past century affect current practices hard data that will help you determine the best practices in cardiopulmonary rehabilitation data that will enhance your ability to treat patients you may have assumed were untreatable and a clear overview of recent research in cardiopulmonary rehabilitation Part I explains not only what has happened in the past but how past and current practices may influence the future Part II offers thorough scientific reviews of pharmacological treatment for CHF and COPD Part III offers the clearest discussion available accompanied by extensive data of how to decide who should be referred and who should not Part IV discusses peripheral muscle limitations and dysfunction Part V addresses risks and benefits for different kinds of patients home exercise programs for COPD patients interactions between exercise and left ventricular remodeling and effects of temperature extremes on people with cardiovascular disease Part VI explains how cardiopulmonary illness as well as various rehab approaches affect a patient's psychosocial health and examines economic evaluations of rehab programs Part VII deals with factors that affect quality of life and how to measure outcomes of treatment in terms of quality of life Finally part VIII looks to the future what is likely to happen in the areas of technology pharmacology psychosocial factors and self help care This well researched volume more than 2 200 bibliographical references is essential for anyone who deals with cardiac or pulmonary patients This is the only single volume that probes the scientific clinical economic and even psychosocial frontiers of cardiac and pulmonary rehabilitation
