This penetrating case study of institution building and entrepreneurship in science shows how a minor medical speciality evolved into a large and powerful academic discipline Drawing extensively on little used archival sources the author analyses in detail how biomedical science became a central part of medical training and practice The book shows how biochemistry was defined as a distinct discipline by the programmatic vision of individual biochemists and of patrons and competitors in related disciplines It shows how discipline builders used research programmes as strategies that they adapted to the opportunities offered by changing educational markets and national medical reform movements in the United States Britain and Germany The author argues that the priorities and styles of various departments and schools of biochemistry reflect systematic social relationships between that discipline and biology chemistry and medicine Science is shaped by its service roles in particular local contexts This is the central theme The author s view of the political economy of modern science will be of interest to historians and social scientists scientific and medical practitioners and anyone interested in the ecology of knowledge in scientific institutions and professions *Nature* Sir Norman Lockyer,1921 **Dictionary Of British And Irish Botantists And Horticulturalists Including plant collectors, flower painters and garden designers** Ray Desmond,2020-12-23 Over the past four centuries botanists and gardeners in the British Isles have gathered maintained and propagated many varying species of plants Their work has been documented in innumerable books and articles which are

often difficult to trace The Dictionary of British and Irish Botanists and Horticulturalists represents a time saving reference source for those who wish to discover more about the lives and achievements of the horticulturalists listed The dictionary's utility comes not only from indicating the major publications of the named authors but also the location of their herbaria and manuscripts The previous 1977 edition of the Dictionary has for many years been a much used source of information for botanists botanic artists and archivists In this revised edition the scope has been expanded to include among its 13 000 entries flower painters in addition to botanical artists over 1400 entries and for the first time garden designers Finally the Dictionary should have international appeal since so many botanists and gardeners worked on collective plants overseas in particular in North America and the British Commonwealth Each entry gives wherever possible details of dates and places of birth and death educational qualifications professional posts honours and awards publications location of plant collections manuscripts drawings and portraits Its main function however is to provide further biographical references to books and periodicals Comprehensive classified indices facilitate access by professions and activities countries and plant interests
