

# PRINCIPLES OF POLAROGRAPHY

Polarography is an electrochemical method of analysis incorporating features of electrolysis. In electrolysis the aim is to remove completely a chosen constituent from the solution by passing an electric current through it for a sufficient length of time. The electrodes have relatively large surfaces and the solution is stirred to facilitate transport of electroactive material to the electrode. The electrolysis in Polarography is of short duration and the electrode on which the constituents are placed out is a dropping mercury electrode or other micro electrode so that the currents are very small.
