Inference Control in Statistical Databases Josep Domingo-Ferrer,2002-04-17 Inference control in statistical databases also known as statistical disclosure limitation or statistical confidentiality is about finding tradeoffs to the tension between the increasing societal need for accurate statistical data and the legal and ethical obligation to protect privacy of individuals and enterprises which are the source of data for producing statistics Techniques used by intruders to make inferences compromising privacy increasingly draw on data mining record linkage knowledge discovery and data analysis and thus statistical inference control becomes an integral part of computer science This coherent state of the art survey presents some of the most recent work in the field The papers presented together with an introduction are organized in topical sections on tabular data protection microdata protection and software and user case studies **Security, Privacy, and Trust in Modern Data Management** Milan Petkovic,Willem Jonker,2007-06-12 The vision of ubiquitous computing and ambient intelligence describes a world of technology which is present anywhere anytime in the form of smart sensible devices that communicate with each other and provide personalized services However open interconnected systems are much more vulnerable to attacks and unauthorized data access In the context of this threat this book provides a comprehensive guide to security and privacy and trust in data management *Privacy and Anonymity in Information Management Systems* Jordi Nin,Javier Herranz,2010-07-16 As depicted in David Lodge s celebrated novel Small World the perceived size of our world

experienced a progressive decrease as jet airplanes became affordable to ever greater shares of the earth's population. Yet the really dramatic shrinking had to wait until the mid 1990s when Internet became widespread and the information age stopped being an empty buzzword. But small is not necessarily beautiful. We now live in a global village and alas some often very powerful voices state that we ought not expect any more privacy in it. Should this be true we would have created our own nightmare: a global village combining the worst of conventional villages where a lot of information on an individual is known by the other villagers and conventional big cities where the individual feels lost in a grim and potentially dangerous place. Whereas security is essential for organizations to survive individuals and so times even companies also need some privacy to develop comfortably and lead a free life. This is the reason why individual privacy is mentioned in the Universal Declaration of Human Rights 1948 and data privacy is protected by law in most Western countries. Indeed without privacy the rest of fundamental rights like freedom of speech and democracy are impaired. The outstanding challenge is to create technology that implements those legal guarantees in a way compatible with functionality and security. This book edited by Dr Javier Herranz and Dr
