Economic Liberalization and Authoritarianism Christian Neugebauer, 2021-11-29 Contrary to other world regions political regimes in the Middle East and North Africa MENA remain largely authoritarian While the search for explanations is still ongoing Christian Neugebauer draws attention to a hitherto underresearched factor economic liberalization Being part of a global shift from state led development towards structural adjustment in the economy these policies also deeply affected the countries of the MENA region This makes the resilience of authoritarianism in the region all the more puzzling as a large part of the scientific community expected economic liberalization to undermine authoritarian regimes Neugebauer strives to solve the puzzle with a comparative case study that covers four countries Egypt Tunisia Jordan and Morocco and their political regimes from independence in the 1950s to the Arab Spring in 2011 He shows that two specific policies of economic liberalization might in fact have been relevant for regime stability consumer price liberalization and privatization

Housing and Planning References, 1967 Handbook of Macroeconomics John B. Taylor, Harald Uhlig, 2016-12-01 Handbook of Macroeconomics surveys all major advances in macroeconomic scholarship since the publication of Volume 1 1999 carefully distinguishing between empirical theoretical methodological and policy issues It courageously examines why existing models failed during the financial crisis and also addresses well deserved criticism head on With contributions from the world's chief macroeconomists its reevaluation of macroeconomic scholarship and speculation on its future constitute an investment worth making Serves a double role as a textbook for macroeconomics courses and as a gateway for students to the latest research Acts as a one of a kind resource as no major collections of macroeconomic essays have been published in the last decade

Value Creation in Leveraged Buyouts Nicolaus Loos, 2007-11-05 The academic and public discussion about Private Equity and Buyout firms and their current acquisition frenzy has once again reached a climax in recent months The reasons are twofold Firstly the flexibility and sophistication of Private Equity investors as well as the capital markets serving them has increased dramatically over the recent years The current availability of funds to be invested by Private Equity managers is enormous estimated to be over 150 billion Equity and debt is raised from institutional investors pension funds and other asset managers who are keen to put their money to work in high yielding investment areas and who continue to be highly receptive to Private Equity following a strong recent return track record of this asset class Relatively cheap lending levels based on stable global economic outlook as well as a much lower than historical level of default rates among buyouts has led banks to increase their risk appetite noticeably Consequently lending banks are offering significant additional financing sources to Private Equity investor clients The year 2005 has been a record year in the industry in terms of overall deal volume including 845 leveraged buyout transactions totalling 198 billion in transaction value globally This is in addition to a record 448 billion in leveraged loans being raised in the global capital markets Buyout deal sizes have reached new heights
