investments in renewable energy systems for district energy systems is performed In the light of digitalization networks are increasingly monitored allowing for a drastic change in the approach for network operation This book also explores the increased digitization and monitoring of networks and how this impacts network operation This book is of interest to engineers academics and officials interested in energy systems presenting readers with the key concepts and tools to adapt to the evolution of district heating into an integrated digitized and higher performing system *Transactions of the American Society of Heating and Ventilating Engineers* American Society of Heating and Ventilating Engineers,1925

Bioenergy 2003-2005 Final Report - September 2005,2005 **Leftover in China: The Women Shaping the World's Next Superpower** Roseann Lake,2018-02-13 Factory Girls meets The Vagina Monologues in this fascinating narrative on China s single women and why they could be the source of its economic future Forty years ago China enacted the one child policy only recently relaxed Among many other unintended consequences it resulted in both an enormous gender imbalance with a predicted twenty million more men than women of marriage age by 2020 and China s first generations of only daughters Given the resources normally reserved for boys these girls were pushed to study excel in college and succeed in careers as if they were sons Now living in an economic powerhouse enough of these women have decided to postpone marriage or not marry at all to spawn a label leftovers Unprecedentedly well educated and goal oriented they struggle to find partners in a society where gender roles have not evolved as vigorously as society itself and where new professional opportunities have made women less willing to compromise their careers or concede to marriage for the sake of being wed Further complicating their search for a mate the vast majority of China s single men reside in and are tied to the rural areas where they were raised This makes them geographically economically and educationally incompatible with city dwelling leftovers who also face difficulty in partnering with urban men given the urban men s general preference for more dutiful domesticated wives Part critique of China s paternalistic ideals part playful portrait of the romantic travails of China s trailblazing women and their well meaning parents who are anxious to see their daughters snuggled into traditional wedlock Roseann Lake s Leftover in China focuses on the lives of four individual women against a backdrop of colorful anecdotes hundreds of interviews and rigorous historical and demographic research to show how these leftovers are the linchpin to China s future **Utilization of Residual Forest Biomass** Pentti Hakkila,2012-12-06 An increase in the demand for wood results in improved recovery and less residual biomass in the forests Paradoxically interest in forest residue as a renewable source of raw material seems to be in a reverse ratio to its availability in a certain area Finland and Sweden are probably more dependent on forestry and forest industries than any other developed countries in the world A sufficiency of raw material for integrated forest industries is vital for the national economy of both countries and a great deal of attention is being paid to the long term potential of unutilized biomass left behind in logging operations Furthermore since these countries possess no reserves of fossil fuels and since their per capita consumption of primary energy is exceptionally high they also

consider unmerchantable forest biomass a realistic source of indigenous energy A joint Nordic research project on harvesting and utilization of logging residue was carried out in 1969 1976 under the auspices of the Nordic Research Council on Forest Operations This fruitful cooperation soon gave rise to related national projects in Sweden Finland Norway and Denmark stimulating further research and producing practical applications Concurrently particularly after the worldwide energy crisis in 1973 research on all aspects of utilization of forest bio mass mushroomed in the United States Canada and the Soviet Union An explosive increase occurred in both the number and diversity of biomass studies
