F. Benson,2024-11-24 The following pages contain certain rules and suggestions concerning health and certain simple and sensible ways in which it may we hope be acquired and maintained at a very small expense of time and self denial by a large number of people who are naturally accustomed to feel not very well The book is founded on notes made by its two authors who though they lead for the most part very different lives are agreed on certain broad principles of health herein set forth One of them for instance eats largely of flesh foods every day the other has scarcely touched meat for years But both are accustomed to feel extremely well and to undertake considerable exertion either of mind or body without experiencing any fatigue One of them takes regular exercise that is to say he plays an out door game on most days of his life while the other who abstains from flesh foods has little practice of the sort He will take no out of door exercise for several days work very hard and find himself perfectly fit for some severe physical test at the end But

they are both agreed that if the one abandoned flesh foods which he does not propose to do he would cease to require regular exercise and that if the other took flesh foods which he does not propose to do he would not only be very ill but would also require regular exercise One again is seldom seen without some appliance of tobacco in his mouth because he finds it agreeable and after an experiment of abstinence from it found that it did not make any difference as far as he could make out in his general health The other never smokes at all One again takes a cold bath in the morning the other a hot one followed by cold sponging But both are absolutely in accord on far more main points than those on which their practice at any rate differs and they have found it perfectly easy to write this book together without wrangling on which account they wish to express a pious hope that the very fact that they differ in so many things may have saved them from dogmatism For it has helped them to realize that even when they are agreed on any point it would be a sheer stupidity to hint that they were therefore right and in consequence they only put forward the points on which they are agreed as suggestions hoping that others after trial may also agree with them For universal laws on an empirical matter like health are rare and the constitutions of men are various One man s meat in fact is literally another man s poison But in the main the two authors are agreed They believe that the majority of mankind habitually eat too much and habitually take too much stimulating food and drink They believe also that most people who do so do not take enough exercise and that either an increase of exercise or a decrease of stimulant is needed They believe that the best sorts of exercise are not those of slow pushing movements such as are made in the use of dumb bells but full brisk extended movements with much use of the breathing apparatus and the large muscle areas of the body Similarly they are in accord as regards present systems of training which tend to treat an entire crew or team as if they were identical specimens not as widely different specimens in every day life also they hold that because a certain mode of diet and work suits A it will not necessarily suit B and C though B and C might do worse than try it
