QWIK GUIDE: GEOFOAM (GEO-TECHNICAL EPS)

UNIQUE CREDENTIALS

Dyplast has over fifty years of development and manufacturing experience with its GeoFoam product line and applications. Dyplast GeoFoam is produced as a large expanded polystyrene (EPS) rigid foam block, typically used as a light-weight/high-strength structural replacement for soil in geo-technical projects or as structural alternatives in applications such as stadium seating and swimming pool foundations in hi-rise hotels. Just a few examples include:

- | | | |
|--------------------------|---------------------------|---------------------------------|
| ➤ road & highway base | ➤ embankments | ➤ swimming pool foundations |
| ➤ bridge approaches | ➤ slope stabilization | ➤ pool decks |
| ➤ loading docks/ramps | ➤ stadium seating | ➤ noise and vibration abatement |
| ➤ airport runway bases | ➤ large-scale landscaping | ➤ buried pipeline base |
| ➤ rail/track foundations | ➤ golf course terracing | ➤ dams and backfill |

Dyplast GeoFoam is highly moisture resistant and will not rot, mold, erode, or settle when properly designed and installed. Dyplast Geofoam additionally has excellent insulating qualities, low hydraulic conductivity, and excellent strength and deformation properties that complement natural soil behavior. Dyplast Geofoam is approximately 1% of the weight of most sandy and/or average moisture soils, and is particularly advantageous in applications where proper soil alternatives:

- are not available
- where settlement and/or erosion are of concern
- where leaching may be problematic.

UNMATCHED QUALITY/DELIVERY

Dyplast GeoFoam has been tested by independent laboratory ([RADCO Report No. RAD-4826](#)) to meet the compressive resistance requirements of ASTM D6817 "Standard Specification for Rigid, Cellular Polystyrene Geofoam". Dyplast Geofoam is available in a range of densities from 1 through 2.0 lb/ft³ to meet varied demands for structural integrity and cost effectiveness, and can be provided in blocks up to 20 feet long, 48 inches wide, and 40 inches thick to optimize the engineering/construction process.

Dyplast's high production capacities, on-hand inventories, and just-in-time deliveries generate advantages for end-users while lowering per-unit costs. Down-stream cutting and fabrication capabilities include CAD and CNC equipment that can achieve unmatched flexibility and tolerance in blocks or smaller pieces of virtually any size and shape.

Qwik Guide To Minerals:

Encyclopedia of Mineral and Energy Policy Günter Tiess, Tapan Majumder, Peter Cameron, 2023-07-14 This Encyclopedia provides a cutting edge up to date reference source on mineral and energy policies around the world It offers information on GDP population investment scenarios and current environmental regulations in over one hundred thirty countries from 13 geographic regions around the world It covers topics such as geo conservation deep mining technology as well as rare earth green technology and international organizations that are actively involved in minerals and energy through exploration arbitration marketing and investment Topical entries are presented alphabetically with extensive cross referencing to ensure user friendly reading This Encyclopedia presents the work of more than 20 section editors and more than 100 international experts in the fields of mineral and energy policies It is designed as a essential resource for researchers students libraries industry governments and international organizations and presents a wealth of insights and guidance for corporate planning regarding exploration and financial investments as well as for venture capitalist and international funding bodies As such it provides an indispensable point of reference for future research on mineral and energy policy

A Quick Guide to Random Wilderness Tiago da Paz, 2022-09-12 For this quick guide we will use the term wilderness for any location in wild unknown and or remote environments thus you will find throughout this material options for the random creation of these types of points present in a campaign map of a game of medieval fantasy Although the focus is on this type of setting it is still possible to use this material for the creation of wilderness in other diverse areas The random generation of wilds and unexplored environments is usually used in styles of games called hexcrawl the association of this type of system with this quick guide is optional as options for different adaptations will be presented

Rocks and Minerals Selby Cull, 2009 Discusses how rocks and minerals are formed and how they can be identified

Mineral Property Evaluation Richard L. Bullock, Scott Mernitz, 2017-12-01 Everything sums up what must be considered for a properly documented property evaluation Less than 30% of the projects that are developed in the minerals industry yield the return on investment that was projected from the project feasibility studies The tools described in this handbook will greatly improve the probability of meeting your projections and minimizing project execution capital cost blowout that has become so prevalent in this industry in recent years Mineral Property Evaluation provides guidelines to follow in performing mineral property feasibility and evaluation studies and due diligence and in preparing proper documents for bankable presentations It highlights the need for a consistent systematic methodology in performing evaluation and feasibility work The objective of a feasibility and evaluation study should be to assess the value of the undeveloped or developed mineral property and to convey these findings to the company that is considering applying technical and physical changes to bring the property into production of a mineral product The analysis needs to determine the net present worth returned to the company for investing in these changes and to reach that decision point as early as possible and with the least amount of money spent on the evaluation study All resources

are not reserves nor are all minerals an ore The successful conclusion of any property evaluation depends on the development work and conclusions of the project team The handbook has a diverse audience Professionals in the minerals industry that perform mineral property evaluations Companies that have mineral properties and perform mineral property feasibility studies and evaluations or are buying properties based on property evaluation Financial institutions both domestic and overseas that finance or raise capital for the minerals industry Consulting firms and architectural and engineering contractors that utilize mineral property feasibility studies and need standards to follow And probably the most important the mining and geological engineering students and geology and economic geology students that need to learn the standards that they should follow throughout their careers
