Bulletin of the United States Bureau of Labor Statistics ,1972 Foundations of Crystallography with Computer Applications Maureen M. Julian,Carla Slebodnick,Francis T. Julian,2024-11-29 The third edition of Foundations of Crystallography with Computer Applications is a textbook for undergraduate and graduate students studying the solid state in chemistry physics materials science geological sciences and engineering It takes a straightforward logical approach to explaining how atoms are arranged in crystals and how crystal systems are related to each other New to this edition is the inclusion of interactive Starter Programs in Python which allow the students to focus on concepts and not treat crystallographic programs as black boxes Since many students have trouble visualizing three dimensional constructions this book begins with detailed discussions in two dimensions leading up to the three dimensional understanding The first seven chapters introduce the fundamental principles Chapter 8 suggests student projects and the final seven chapters give detailed examples of the seven crystal systems Key features Uses Python the leading open source scientific language with libraries including NumPy for matrix manipulations Matplotlib for graphics and Mplot3d for interactive 3 D modeling Provides a gentle introduction to Python with Jupyter Notebooks which combine interactive code and formatted documentation Color codes both point group and space group diagrams using a new scheme devised by the author to emphasize the change of handedness of the symmetry operations and their consequences Suggests student projects with data that can be found in the free Teaching Subset of the Cambridge Structural Database the American Mineralogist Crystal Structure Database and others This book s thorough but accessible style gives students a strong foundation in the subject Over one thousand students have successfully used this book at Virginia Tech and many more will continue to benefit from this new edition

The Disc Embedding Theorem Stefan Behrens,Boldizsar Kalmar,Min Hoon Kim,Mark Powell,Arunima Ray,2021-07-15 Based on Fields medal winning work of Michael Freedman this book explores the disc embedding theorem for 4 dimensional manifolds This theorem underpins virtually all our understanding of topological 4 manifolds Most famously this includes the 4 dimensional Poincar conjecture in the topological category The Disc Embedding Theorem contains the first thorough and approachable exposition of Freedman s proof of the disc embedding theorem with many new details A self contained account of decomposition space theory a beautiful but outmoded branch of topology that produces non differentiable homeomorphisms between manifolds is provided as well as a stand alone interlude that explains the disc embedding theorem s key role in all known homeomorphism classifications of 4 manifolds via surgery theory and the s cobordism theorem Additionally the ramifications of the disc embedding theorem within the study of topological 4 manifolds for example Frank

Quinn's development of fundamental tools like transversality are broadly described. The book is written for mathematicians within the subfield of topology specifically interested in the study of 4 dimensional spaces and includes numerous professionally rendered figures.

Uncreative Writing Kenneth Goldsmith, 2011-08-16 Can techniques traditionally thought to be outside the scope of literature including word processing databasing identity ciphering and intensive programming inspire the reinvention of writing? The Internet and the digital environment present writers with new challenges and opportunities to reconceive creativity authorship and their relationship to language. Confronted with an unprecedented amount of texts and language writers have the opportunity to move beyond the creation of new texts and manage parse appropriate and reconstruct those that already exist. In addition to explaining his concept of uncreative writing which is also the name of his popular course at the University of Pennsylvania Goldsmith reads the work of writers who have taken up this challenge. Examining a wide range of texts and techniques including the use of Google searches to create poetry the appropriation of courtroom testimony and the possibility of robo poetics Goldsmith joins this recent work to practices that date back to the early twentieth century. Writers and artists such as Walter Benjamin Gertrude Stein James Joyce and Andy Warhol embodied an ethos in which the construction or conception of a text was just as important as the resultant text itself. By extending this tradition into the digital realm uncreative writing offers new ways of thinking about identity and the making of meaning.

Piaget and Knowing Beryl A. Geber, 2013-01-11 The twin problem of helping students synthesise separate aspects of psychology and as research workers familiarising each other with our own thinking prompted the series of seminars on which this volume is based. This book like its associated seminars represents not only the interests of the authors but also the needs of students both undergraduate and graduate for whom it has been prepared. The seminars were held in the Psychology Department at the London School of Economics and Political Science. This book aims to present an integration of some of the research problems that are current by showing how each is concerned with the problem of knowing and understanding and how together they throw light on some of the issues raised by Piaget.
