Guidelines for Design of Low-Rise Buildings Subjected to Lateral Forces Ajaya Kumar Gupta, Peter James

Moss, 2020-11-25 *Guidelines for Design of Low Rise Buildings Subjected to Lateral Forces* is a concise guide that identifies performance issues, concerns, and research needs associated with low rise buildings. The book begins with an introduction that discusses special problems with low rise buildings subjected to wind and earthquakes. Chapter 2 examines probabilistic methods and their use in evaluating risks from natural hazards. It also addresses the characteristics of wind and seismic forces and levels of risk implied by building codes. Wind forces are covered in more detail in Chapter 3 with discussions of wind force concepts and wind structure interactions. Chapter 4 is devoted to earthquake forces and traces the development of building codes for earthquake resistant design. Chapter 5 describes the main framing systems used to resist lateral forces and discusses the code requirements for drift control. The designs and requirements for connections between building elements are addressed in Chapter 6. It includes examples along with several illustrations of suitable connections. The performance of non structural elements during wind and earthquake forces is also examined in detail. This book serves as an important reference for civil engineers, construction engineers, architects, and anyone concerned with structural codes and standards. It is an excellent guide that can be used to supplement design recommendations and provide a design basis where there are no current requirements.

Investigations in Environmental Geology Duncan

Foley, Garry D. McKenzie, Russell O. Utgard, 2009 This lab guide helps readers learn to make wise choices for sustainability in a finite, changing, and geologically active world. Eighteen exercises cover many current issues in environmental geology and are introduced in four sections: Earth's Materials, Geologic Time and Geologic Processes, Maps, Aerial Photographs, and Satellite Images, Measurements, Basic Calculations and Conversions, and Graphs. Volcanoes, Volcanic Products, and Volcanic Hazards; Hazards of Mount St. Helens; Earthquake Epicenters, Intensities, Risks, Faults, Nonstructural Hazards, and Preparation; The Loma Prieta Earthquake of 1989; and Forecasting Earthquakes in the Bay Region. Landslides and Avalanches; Subsidence; River Floods; Coastal Hazards; Groundwater Hydrology; Water Quality; Data and Pollution Sources; Lake and River Contamination from Industrial Waste; Groundwater and Surface Water Contamination from Resource Extraction; Groundwater Overdraft and Saltwater Intrusion; Geology and Regional Planning; Global Change and Sustainability. A hands-on reference for anyone who wants to make more informed choices and review information critically about the environment.

Earth System Science in the Anthropocene Eckart Ehlers, Thomas Krafft, 2006-03-14 *Earth System Science in the Anthropocene* aims to provide an in-depth perspective and update on special topics in Global Environmental Change in relation to Human Security. It gives an overview on the new Joint Projects of the four International Global Change Programmes and on research efforts in Germany. It is also an up-to-date report on emerging necessities in Global Environmental Change research as well as suggestions for its future development.

Interactive Data Processing and 3D Visualization of the Solid Earth Daniel Patel, 2022-02-21 This book presents works detailing the application of processing and visualization techniques for analyzing the Earth s subsurface The topic of the book is interactive data processing and interactive 3D visualization techniques used on subsurface data Interactive processing of data together with interactive visualization is a powerful combination which has in the recent years become possible due to hardware and algorithm advances in The combination enables the user to perform interactive exploration and filtering of datasets while simultaneously visualizing the results so that insights can be made immediately This makes it possible to quickly form

hypotheses and draw conclusions Case studies from the geosciences are not as often presented in the scientific visualization and computer graphics community as e g studies on medical biological or chemical data This book will give researchers in the field of visualization and computer graphics valuable insight into the open visualization challenges in the geosciences and how certain problems are currently solved using domain specific processing and visualization techniques Conversely readers from the geosciences will gain valuable insight into relevant visualization and interactive processing techniques Subsurface data has interesting characteristics such as its solid nature large range of scales and high degree of uncertainty which makes it challenging to visualize with standard methods It is also noteworthy that parallel fields of research have taken place in geosciences and in computer graphics with different terminology when it comes to representing geometry describing terrains interpolating data and example based synthesis of data The domains covered in this book are geology digital terrains seismic data reservoir visualization and CO2 storage The technologies covered are 3D visualization visualization of large datasets 3D modelling machine learning virtual reality seismic interpretation and multidisciplinary collaboration People within any of these domains and technologies are potential readers of the book
