Regenerating Agriculture Policies And Practice For Sustainability And Self Reliance:

Regenerating Agriculture Jules N. Pretty, 1995 The author looks at the challenge facing agriculture today and details the concepts and characteristics of alternative sustainable agricultural practices Empirical evidence from a diverse range of agro ecological and community setting show the impact of more sustainable practices In addition existing policy frameworks and institutional processes are considered and alternatives which are known to work are presented *Regenerating Agriculture* Jules N. Pretty, 1995-05-17 It is becoming increasingly clear that a more sustainable agriculture can bring economic environmental and social benefits to farmers communities and nations *Regenerating Agriculture* draws together for the first time new empirical evidence from a diverse range of agroecological and community settings to show the impacts of more sustainable practices Twenty cases involving widespread success from Brazil Burkina Faso Honduras India Indonesia Kenya Lesotho Mali Mexico Peru Philippines and Sri Lanka are presented and are supported by field and community level data from more than 50 projects and programs in 28 countries Despite this emerging evidence many farmers still depend on high levels of external inputs *Regenerating Agriculture* identifies the common elements of successful programs and shows how those still using modernist approaches to agriculture can successfully turn to sustainable farming The first chapter outlines the scale of the challenge and includes analysis of sustainable agriculture s characteristics and underlying philosophies and values Pretty then presents analyses of the processes of agricultural modernization focusing on both production and conservation oriented programs and policies and the common elements of success Almost all of these successes have been achieved despite existing biased policy environments that strongly favor modern approaches to agricultural development and at the same time discriminate against sustainability *Regenerating Agriculture* examines policy frameworks and institutional processes then sets out 25 effective policies that are known to work to support the transition to greater sustainability and self reliance in agriculture **Regenerating Agriculture** Jules N. Pretty, 1994 Regenerating Agriculture Jules N Pretty, 1998 **Ecological Complexity and Agroecology** John Vandermeer, Ivette Perfecto, 2017-10-24 This text reflects the immense current growth in interest in agroecology and changing approaches to it While it is acknowledged that the science of ecology should be the basis of agroecological planning many analysts have out of date ideas about contemporary ecology Ecology has come a long way since the old days of the balance of nature and other romantic notions of how ecological systems function In this context the new science of complexity has become extremely important in the modern science of ecology The problem is that it tends to be too mathematical and technical and thus off putting for the average student of agroecology especially those new to the subject Therefore this book seeks to present ideas about ecological complexity with a minimum of formal mathematics The book s organization consists of an introductory chapter and a second chapter providing some of the background to basic ecological topics as they are relevant to agroecosystems e g soil biology and pest control The core of the book consists of seven chapters on key intersecting themes of ecological complexity

including issues such as spatial patterns network theory and tipping points illustrated by examples from agroecology and agricultural systems from around the world *Measuring Sustainability* Simon Bell, Stephen Morse, 2013-06-17 Chapter 3 Systemic Sustainability Analysis and Prospective Introduction The importance of the subjective Background to CAMP Malta Technical specification for SSA Familiarizing the Maltese SSA team What are SSA and SPSA and how are they different SPSA and Blue Plan approaches Chapter 4 Doing SPSA Some Reflective Experience Introduction Stage 1 Find out how things are reflection Stage 2 Understand the context for sustainability indicators reflection connection Stage 3 Gather the stakeholders in the sustainability indicator process reflection connection Toward Sustainable Agricultural Systems in the 21st Century National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Twenty-First Century Systems Agriculture, 2010-07-25 In the last 20 years there has been a remarkable emergence of innovations and technological advances that are generating promising changes and opportunities for sustainable agriculture yet at the same time the agricultural sector worldwide faces numerous daunting challenges Not only is the agricultural sector expected to produce adequate food fiber and feed and contribute to biofuels to meet the needs of a rising global population it is expected to do so under increasingly scarce natural resources and climate change Growing awareness of the unintended impacts associated with some agricultural production practices has led to heightened societal expectations for improved environmental community labor and animal welfare standards in agriculture Toward Sustainable Agricultural Systems in the 21st Century assesses the scientific evidence for the strengths and weaknesses of different production marketing and policy approaches for improving and reducing the costs and unintended consequences of agricultural production It discusses the principles underlying farming systems and practices that could improve the sustainability It also explores how those lessons learned could be applied to agriculture in different regional and international settings with an emphasis on sub Saharan Africa By focusing on a systems approach to improving the sustainability of U S agriculture this book can have a profound impact on the development and implementation of sustainable farming systems Toward Sustainable Agricultural Systems in the 21st Century serves as a valuable resource for policy makers farmers experts in food production and agribusiness and federal regulatory agencies **Sustainable Farmland Management** Robert Fish, 2008 Examining the relationship between sustainability and farmland management in differing temporal spatial and production contexts this book considers farmland multifunctionality systems and systemic thinking debate over information and knowledge and ethical aspects It suggests productive ways of proceeding to enhance integrated thinking on the subject and will be essential reading for researchers and students in agriculture rural studies environmental management geography sociology ecology and conservation Sustainable Agriculture and Food Security in an Era of Oil Scarcity Julia Wright, 2012-05-16 When other nations are forced to rethink their agricultural and food security strategies in light of the post peak oil debate they only have one living example to draw from that of Cuba in the 1990s Based on the first and up till now

only systematic and empirical study to come out of Cuba on this topic this book examines how the nation successfully headed off its own food crisis after the dissolution of the Soviet Bloc in the early 1990s The author identifies the policies and practices required for such an achievement under conditions of petroleum scarcity and in doing so challenges the mainstream globalized and privatized food systems and food security strategies being driven through in both industrialized and more vulnerable developing regions Paradoxically the book dispels the myth that Cuba turned to organic farming nationwide a myth founded on the success of Cuba's urban organic production systems which visitors to the country are most commonly exposed to In rural regions where the author had unique access industrialized high input and integrated agriculture is aspired to for the majority of domestic production despite the ongoing fluctuations in availability of agrochemicals and fuel By identifying the challenges faced by Cuban institutions and individuals in de-industrializing their food and farming systems this book provides crucial learning material for the current fledgling attempts at developing energy descent plans and at mainstreaming more organic food systems in industrialized nations It also informs international policy on sustainable agriculture and food security for less industrialized countries
