Astronomy with Schmidt-Type Telescopes M. Capaccioli, 2012-12-06 The idea of holding a colloquium on Schmidt telescopes techniques and science originated from the observation that in the last ten years and in spite of the remarkable developments and achievements in this field of astronomical research there had been no specific opportunity for the experts to meet together make the point on the state of the art discuss and coordinate future plans Therefore Prof L Rosino one of the pioneers in the use of wide field telescopes driven also by the wish of honouring the over four decades of activity of the Asiago Observatory proposed to the Executive Committee of the International Astronomical Union to sponsor a colloquium on Astronomy with Schmidt type telescopes I to be held at Asiago at the end of the summer of 1983 Details about the composition of the Scientific Organizing Committee and the sponsoring organizations are given in Prof Rosino's Welcome to the Participants The granting of this proposal was the beginning of a number of headaches for the members of the Local Organizing Committee R Barbon F Ciatti P Rafanelli and myself If organizationwise the colloquium was successful this is truly due to the generous efforts of my colleagues of the SOC and to the efficient organization of the Linta Park the hotel hosting the meeting

Surveys of the Southern Galaxy W.B.

Burton, F.P. Israël, 2013-06-29 Problems associated with a general scarcity of observations of the southern sky have persisted since the present era of galactic research began some sixty years ago In his 1930 Halley Lecture A S Eddington commented on the observational support given to J H Oort's theory of galactic rotation by the stellar radial velocities measured by Plaskett and Pearce out of 250 stars only 4 were between 193 and 343 0 galactic longitude 1 225

Clusters and Groups of Galaxies F. Mardirossian, G. Giuricin, M. Mezetti, 2012-12-06 The large scale structure of the Universe and systems Clusters and Groups of galaxies are topics like Superclusters They fully justify the meeting on Clusters of great interest and Groups of Galaxies The topics covered included the spatial distribution and the clustering of galaxies the properties of Superclusters Clusters and Groups of galaxies radio and X ray observations the problem of unseen matter theories concerning hierarchical clustering pancakes cluster and galaxy formation and evolution The meeting was held at the International Center for Theoretical Physics in Trieste Italy from September 13 to September 16 1983 It was attended by about 150 participants from 22 nations who presented 67 invited lectures and contributed papers and 45 poster papers The Scientific Organizing Committee consisted of F Bertola P Biermann A Cavaliere N Dallaporta D Gerbaia M Hack J V Peach D Sciama Chairman G Setti M Tarenghi We are particularly indebted to D Sciama A Cavaliere and F Bertola for their work of coordination We were acting as the three members of the Local Organizing Committee Moreover we are pleased to thank the Chairmen of the Sessions M Hack N Dallaporta G Burbidge B Mills M Rees P Biermann L Z Fang L Gouguenheim for their valuable help

The Nature of Symbiotic Stars M. Friedjung, Roberto Viotti, 2012-12-06 Many aspects of symbiotic stars have long puzzled astronomers For instance while most students of the subject have considered them binary many have at different times supported single star models The nature of their outbursts is uncertain while the dividing line between symbiotic stars and novae is unclear In any case doubts can even be raised as to whether a class of Symbiotic Stars really exists Much new data has been obtained in recent years in particular from the study of radiation outside the visual region Many symbiotic stars have been studied in the UV with IUE since 1978 while X rays were detected in a few cases with the Einstein satellite There have been a number of infrared and radio studies and the number of known symbiotic stars has also considerably increased Furthermore theoretical ideas have in recent years been considerably enriched by concepts of stellar winds and accretion phenomena in binaries including accretion disks It was therefore extremely opportune and timely to hold the first international meeting exclusively devoted to these stars so as to consider the new results from such a wide range of observations in different spectral regions and the conclusions which can be drawn for possible models as well as theories of the nature and structure of symbiotic stars After a session devoted to new observations in different spectral regions a session was spent considering some individual stars

Instrumentation for Astronomy with Large Optical Telescopes C.M. Humphries, 1982-06-30 Interest world wide in the provision of new observational astronomical facilities in the form of ground based optical telescopes of large aperture has never been higher than exists at present The benefits to be

gained from increased aperture size however are only utilised effectively if efficient instrumentation is also available There have been significant improvements recently in this area particularly in detector technology and data handling as well as in optical design so that systems which are currently being developed have the capability of being vastly more powerful in terms of the efficient use of photons than those which existed only 5 years ago The rationale for the decision by Commission 9 of the International Astronomical Union to hold IAU Colloquium 67 therefore was to obtain reports on these developments with the emphasis placed upon overall efficiency of the complete observational system from telescope aperture right through to detector output A fitting venue for the meeting was the site of the 6 metre BTA Bolshoi Azimuth Telescope at Zelenchukskaya in the Caucasus mountains USSR The BTA is operated by the Special Astrophysical Observatory located at Nizhnij Arkhyz a few kilometres from the telescope itself

Kinematics, Dynamics and Structure of the Milky Way W.L.H. Shuter, 2012-12-06 The idea of holding this workshop on The Milky Way arose at the conference dinner of a meeting on Regions of Recent Star Formation held at Penticton in June 1981 Leo Blitz now at the University of Maryland and I decided that there was a need and agreed that we would organize one in Vancouver in the Spring of 1982 The purpose of the workshop was to have an intensive exchange of ideas between some of the most active workers in the field regarding the recent work which has been significantly changing our concepts of the Milky Way To achieve this we limited the number of participants and planned the program so that there was ample time for discussion The meeting appeared to work very well both scientifically and socially and this volume contains 50 of the 55 papers that were The discussion was very lengthy but since the papers were presented written up after the meeting many of the points raised have been in the publications and it seems pointless to reproduce it incorporated here Leo and I would like to thank the many people who helped to make the meeting a success at UBC and Frank J Kerr Provost of MPSE C V Finnegan Dean of Science at the University of Maryland who welcomed the participants on behalf of the sponsoring Universities Bart Bok who opened the scientific proceedings and Maarten Schmidt who gave the closing summary

Effects of Mass Loss on Stellar Evolution Cesare Chiosi, R. Stalio, 1981-07-31 The IAU Colloquium No 59 The effects of mass loss on Stellar Evolution was held on September 15 19 1980 at the International Centre for Theoretical Physics Miramare Trieste Italy under the auspices of the IAU Executive Committee and the Italian National Council of Research The planning of this conference began two years ago during the IAU Symposium No 83 Mass loss and evolution of O type stars Qualicum Beach Victoria Canada when we felt that mass loss and its effects on the evolution of stars was too broad a subject for being confined to O type stars only Therefore we thought that a conference dealing with the general problem of mass loss across the whole HR diagram would have been of interest to all people working in the field The main idea was that bringing together Astronomers and Astrophysicists of the widest range of interests and expertise all in some way related to the problem of mass loss from stars would have spurred thorough discussions on the many aspects and implications of this topic We hope this goal has been achieved Furthermore the most

recent observational and theoretical developments on the problem of mass loss from early type stars avoided this meeting to be a simple updating of the Quilicura Beach Symposium as far as this issue is concerned
