Summary

Raja M, Azzoni A, Lubich L. Religious delusion. Schweiz Arch Neurol Psychiatr 2000;151:22-9.

Objective: Little is known about the clinical features associated with religious delusion and how religious delusion may differ across various diagnostic groups. The empirical research on this topic is relatively scanty. The primary purpose of this study was to detect the demographic, sociocultural, and clinical features of patients with religious delusion.

Method: We studied 313 patients consecutively admitted to an emergency psychiatric ward and compared patients with and without religious delusion.

Results: Patients with religious delusion were older, had started their first neuroleptic treatment earlier, had suffered less acute psycho-social stressors, and had presented a worse global functioning during the last year than patients without religious delusion. Furthermore, they received higher SAPS, BPRS total and BPRS psychotic cluster scores and were treated with a higher mean number of different neuroleptics during current hospitalisation. Religious delusion was not related to any diagnostic group.

Conclusions: Our results suggest an alternative outlook on delusions that de-emphasises the importance of diagnosis and looks instead at delusions and other major symptom areas as psychopathological dimensions.

Keywords: emergency psychiatry; delusion; religious delusion; religion and psychology

Introduction

Delusions are common and main symptoms in many neuropsychiatric disorders. Nevertheless, as Spitzer [1] notes, their nature is poorly understood, their aetiology is unknown, and their nosological status remains problematic. Furthermore, despite the frequency and the importance of delusions, a relatively small amount of research has been conducted in this field [2]. Questions about how delusions may differ across diagnostic groups are still unanswered.

Some forms of delusion are considered to be characteristic of schizophrenia or bipolar disorder, however, no delusional content is specific of these illnesses. Traditionally, religious delusion, with or without hallucinations, has been associated with schizophrenia, affective psychoses, complex partial seizure disorder and drug-induced psychoses. Recent reports have associated religious delusion with epileptic postictal psychosis [3], psychoses characterised by self-inflicted injuries [4-6], psychoses induced by general medical illnesses [7, 8], and mystical-religious fervor [9].

Although religious delusion has regularly been reported throughout the history of neuropsychiatry, surprisingly, there is no systematic study of religious delusion in unselected populations of psychiatric patients. We conducted computerised searches of MEDLINE back to 1966, but we did not find empirical studies on this subject.

As our hospital is situated at the centre of Rome, near St. Peter's Basilica, we have the opportunity to visit an unusually large number of patients with religious delusion. Many of these patients are referred to our centre because they display bizarre, shameful, or dangerous behaviour associated with their psychotic symptoms nearby the Basilica. Visitors to St. Peter's Basilica or to the Vatican displaying an abnormal behaviour are interviewed by town police officers and then referred to our hospital if they are considered mentally ill. This prompted us to undertake the present study to detect the demographic, sociocultural, and clinical features of patients with religious delusion

Is Faith Delusion? Andrew Sims, 2009-03-09 Is faith delusion Is religion bad for your health How in a scientifically and technologically advanced age can people still believe in God spirit other Clearly not all believers are primitive and ill educated an alternative explanation is that they must be mad or at least severely neurotic as suggested by Freud This book starts by looking at and giving reasons for the connection and the division between Christian faith and psychiatry It asks whether science challenges Christians involved with psychiatry as patients or professionals and whether the spiritual needs of patients are recognised The author examines the scope and use of the neuro sciences and considers cause and effect natural selection and determinism He explores the overlap and the difference between psychiatric symptoms and religious belief the possible association between demon possession and mental illness and the idea that some people are intrinsically religious and some are not The variations of personality are examined with their implications for belief Posited as a statement that faith is delusion is always hostile but outcome studies reviewed here show that in general religious belief and practice convey good mental health Religious faith and mental illness are different and their concepts come from different world views A consideration of them in relation to each other is long overdue The author is a former Professor of Psychiatry and President of the Royal College of Psychiatrists and has also been Chairman of their Spirituality and Psychiatry Special Interest Group so is exceptionally well qualified to address the subject Although the book is technically proficient it is aimed at the general reader and is illustrated with stories brief case histories and anecdotes

Crimes of Violence by Mentally Abnormal Offenders W. Boker, H. Häfner, 1982-05-20 Originally published in German in 1973 and first published in English as this Cambridge edition in 1982 this is a detailed and systematic account of the extent to which mentally abnormal offenders are likely to commit crimes of major violence based upon a study of all the 533 men and women in the Federal German Republic from 1955 to 1964 who were detained in hospitals after committing homicide or near homicide The authors calculated that such patients are no more but also no less dangerous than the rest of the population and that the policy of treating psychotic or seriously subnormal patients in the community does not expose the public to risk The book makes important suggestions for the prevention of such disasters by describing the diagnoses special symptoms

and social situations which involve a special risk especially to close relatives and those with whom the patient is emotionally involved

Trauma, Psychosis, and Posttraumatic Stress Disorder Kate V. Hardy, Kim T. Mueser, 2017-12-21 There is abundant evidence showing a strong association between trauma exposure psychotic symptoms and posttraumatic stress disorder PTSD Early trauma exposure contributes to the formation of psychotic symptoms and the development of psychotic disorders or severe mental illnesses such as schizophrenia bipolar disorder and treatment refractory major depression Furthermore among persons with psychotic disorders multiple traumatization over the lifetime is common due to factors such as social stigma the criminalization of severe mental illness and increased vulnerability to interpersonal victimization In addition to these factors is the traumatic nature of experiencing psychotic symptoms and coercive treatments such as involuntary hospitalization and being placed in seclusion or restraints Not surprisingly these high rates of trauma lead to high rates of PTSD in people with psychotic disorders which are associated with more severe symptoms worse functioning and greater use of acute care services In addition to the impact of trauma on the development of psychotic disorders and comorbid PTSD traumatic experiences such as childhood sexual and physical abuse can shape the nature of prominent psychotic symptoms such as the content of auditory hallucinations and delusional beliefs Additionally traumatic experiences have been implicated in the role of stress responsivity and increased risk for transition to psychosis in those identified as being at clinical high risk of developing psychosis Finally although the diagnostic criteria for PTSD primarily emphasize the effects of trauma on anxiety avoidance physiological over arousal and negative thoughts it is well established that PTSD is frequently accompanied by psychotic symptoms such as hallucinations and delusions that cannot be attributed to another DSM V Axis I disorder such as psychotic depression or schizophrenia Understanding the contribution of traumatic experiences to the etiology of psychosis and other symptoms can inform the provision of cognitive behavioral therapy for psychosis including the development of a

shared formulation of the events leading up to the onset of the disorder as well as other trauma informed treatments that address distressing and disabling symptoms associated with trauma and psychosis Until recently the trauma treatment needs of this population have been neglected despite the high rates of trauma and PTSD in persons with psychotic disorders and in spite of substantial gains made in the treatment of PTSD in the general population Fortunately progress in recent years has provided encouraging evidence that PTSD can be effectively treated in people with psychotic disorders using interventions adapted from PTSD treatments developed for the general population In contrast to clinician fears about the untoward effects of trauma focused treatments on persons with a psychotic disorder research indicates that post traumatic disorders can be safely treated and that participants frequently experience symptom relief and improved functioning There is a need to develop a better understanding of the interface between trauma psychosis and post traumatic disorder This *Frontiers Research Topic* is devoted to research addressing this interface *Religion, Culture and Mental Health* Kate

Loewenthal,2006-12-21 Are religious practices involving seeing visions and speaking in tongues beneficial or detrimental to mental health Do some cultures express distress in bodily form because they lack the linguistic categories to express distress psychologically Do some religions encourage clinical levels of obsessional behaviour And are religious people happier than others By merging the growing information on religion and mental health with that on culture and mental health Kate Loewenthal enables fresh perspectives on these questions This book deals with different psychiatric conditions such as schizophrenia manic disorders depression anxiety somatisation and dissociation as well as positive states of mind and analyses the religious and cultural influences on each Faith and Mental Health Harold G Koenig,2005-09-01 Koenig opens a window on mental health providing an unprecedented source of practical information about the relationship between religion and mental health Dr Koenig examines how Christianity and other world religions deliver mental health services today and he makes recommendations based on research expertise and experience for new programs to meet local needs

The Epitome ,1888 Containing a retrospective view of every discovery and practical improvement in the medical sciences abstracted from the current medical journals of the United States and Canada *Behavior Modification in Black Populations* Samuel M. Turner,2012-12-06 During the past decade research and practice in the field of behavior modification have experienced phenomenal growth Behavioral inter vention strategies that were considered strictly experimental a few years ago are now accepted therapeutic modalities and behavioral method ology has been instrumental in creating an atmosphere conducive to the development of scientific rigor in the area of mental health But behav ioral influence has not been limited to mental health There has been considerable impact in education industry government and general health care Although behavior modification has made a significant impact on psychology in general there has been a noticeable lack of theorizing and empirical research on issues primarily related to black populations In fact the black community in general and black psychologists in partic ular often have viewed behavioral approaches with suspicion We hope that the material

presented in this volume will serve to clarify what the behavioral approach is and what it is not and that it will help to foster an understanding of the behavioral approach Moreover empirical data demonstrating the effectiveness of behavioral procedures with black populations are presented It is our hope that the material will provide some insight into how behavioral theory methodology and therapeutic strategies can be used to the benefit of black mental health in particular and the overall psychological health of the black community in general

barrier to using the scales in practice Even within the same psychopathology domain many published measurement scales exist For instance the book published by Waters and Stephane includes 120 scales for psychosis Among the 120 scales for psychosis which scale s should the clinician choose Our proposed manual will remove these barriers by creating simple and universal principles which allow readers to use the 33 reliable and validated SCIP scales with most adult psychiatric disorders There will be 15 videotaped interviews available online for readers who buy the book Readers are expected to watch the interviews in conjunction with reading the manual
