Unit Operations in Environmental Engineering Robert Noyes, 1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows 1 Biological Technology 2 Chemical Technology 3 Containment and Barrier Technology 4 Immobilization Technology 5 Membrane Technology 6 Physical Technology 7 Radiation and Electrical Technology 8 Thermal Destruction Technology Traditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume

increasing importance However such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies

Evaluation of Remedial Action Unit Operations at Hazardous Waste Disposal Sites John Ehrenfeld, Jeffrey Bass, 1984 **EPA-540/P.** ,1991 **Remediation of Petroleum Contaminated Soils** Eve Riser-Roberts, 2020-11-25 This book combines the results of current research with essential background material to provide complete in depth coverage of every aspect of in situ and ex situ bioremediation as well as an extensive overview of the physical and chemical processes currently available for treating petroleum contaminated soils Critical information has been collected and assembled under one cover to provide a convenient reference for anyone who must contend with this worldwide problem Remediation of Petroleum Contaminated Soils Biological Physical and Chemical Processes describes how to optimize the biodegradation of petroleum hydrocarbons in soil water systems It reports on the susceptibility of various petroleum components to biodegradation by microorganisms and considers all groups of microorganisms for their potential contributions The book also deals with problem areas such as the transport of organisms oxygen or nutrients throughout the subsurface as well as biodegradation of polynuclear aromatic hydrocarbons PAHs and nonaqueous phase liquids NAPLs In addition the book presents a variety of methods for monitoring bioremediation This reference discusses current soil remediation processes and includes many innovative approaches It also investigates means of controlling volatile organic compounds VOCs and leachate and addresses methods for collecting and treating these secondary waste streams The expansive coverage of this book will furnish readers with a wide range of options for developing treatment strategies and for customizing procedures for specific requirements **Report of Progress - MERL.** Municipal Environmental Research Laboratory, 1980 **Guidance on Feasibility Studies Under CERCLA** ,1985
