green materials cleaner processes and sustainability assessment Includes case studies based on full scale commercial soil and groundwater remediation projects      Geoenvironmental Engineering Raymond N. Yong, Raymond Nen Yong, H. R. Thomas, 1999 Geoenvironmental engineering issues are of increasing importance around the world This international trend is apparent in the UK governments active encouragement of the use of brownfield sites for urban development to ease the pressure on the countryside This book contains the collected papers from the 2nd Geoenvironmental Engineering Conference organised by the British Geotechnical Society and Cardiff Universitys Geoenvironmental Engineering Research Centre

*Contaminated Soils, Sediments and Water*: Edward J. Calabrese, Paul T. Kostecki, James Dragun, 2004-10-01 Volume 9 of the series presents 38 technical papers covering a wide range of environmental issues including Bioremediation Chemical Oxidation Heavy Metals MTBE Phytoremediation Radiation Regulatory and Legal issues Remediation Risk Based Cleanup and Site Assessment Contributing authors are drawn from across the spectrum of interest government agencies academic institutions the consulting community and industrial companies      **Remediation Engineering** Suthan S. Suthersan, John Horst, Matthew Schnobrich, Nicklaus Welty, Jeff McDonough, 2016-11-25 Remediation engineering has evolved and advanced from the stage of being a sub discipline of environmental engineering into its own engineering discipline supporting the growth of a global industry This fully updated second edition will capture the fundamental advancements that have taken place during the last two decades within the sub disciplines that form the foundation of the remediation engineering platform The book will cover the entire spectrum of current technologies that are being employed in this industry and will also touch on future trends and how practitioners should anticipate and adapt to those needs      **Remediation Engineering** Suthan S. Suthersan, Jeff McDonough, 1996-10-24 In many cases the application of in situ technologies evolved as a necessity from a cost perspective However the basic understanding of the mechanisms and theory behind these technologies was treated as a black box Although we have seen some tremendous successes in the application of remediation technologies over the past several years we have also seen many cases in which a technology has been incorrectly or inappropriately applied In most cases this misapplication has been the result of a poor understanding of the basic concepts and mechanisms behind the technologies Without proper understanding the potential for misapplication of technologies remains a serious economic and technical threat      **Remediation of Hazardous Waste Contaminated Soils** Donald L. Wise, 2017 This unique single source reference offers a thorough treatment of the remediation of soils contaminated by hazardous wastes and the scientific and engineering issues that must be addressed in creating practical solutions for their reclamation Provided by publisher

Reclamation of Contaminated Land C. Paul Nathanail, R. Paul Bardos, 2005-09-27 Land contamination is of global concern with many of the world s industries potentially harming the environment and human health Along with rapidly changing policy and technological developments this is an interdisciplinary area in which successful contaminated land management depends on the expertise of and interaction between a number of scientific and engineering disciplines Reclamation of

Contaminated Land takes into account the different groups involved in contaminated land management and offers a flexible learning approach based on practical experience and research. It presents an overview of the general skills and knowledge required encompassing both general management and regulatory practice and specific land contamination issues. Divided into two parts, Part I discusses site characterisation and the design of site investigations and the central role of conceptual models and risk assessment in decision making. Part II discusses how risks from contaminated land are managed and the role of different remediation approaches to achieving this. This book is of great value for 2nd, 3rd, 4th year undergraduates and MSc students in Environmental Science, Environmental Technology, Environmental Management, Geography, Geology, Estate and Land Management. It is also key reading for undergraduates and MSc students in Chemical Engineering, Civil Environmental Engineering and Environmental Chemistry as well as professional planners and developers and local authorities.
