Renal Handling Of Phosphate:

Renal Handling of Phosphate Shaul G. Massry, 2012-12-06 When Shaul Massry and Herbert Fleisch asked me to write a foreword for this book I was honored and eagerly looked forward to reading the many chapters As they came and I skimmed through them my mind wandered back to the earliest classic contributions in this field in the late 1920s and early 1930s by Albright and his associates Greenwald and Gross and Adolph on the homeostatic regulation of inorganic phosphate and the central role of parathyroid hormone PTH in this regulation They clearly showed the exquisite sensitivity of the renal handling of phosphate to varying dietary and parenteral loads and to changes in the level of PTH That two outstanding investigators in the field of divalent ion metabolism should choose to edit a book solely about the renal handling of inorganic phosphate shows how far we have progressed from these early classics to the recent almost exponential increase in the research and publications related to this subject Despite this increase I asked myself is such a large new monograph consisting of 13 chapters and 30 distinguished authors warranted My reading of these chapters and my learning so much from them convinced me that it is and my pride was heightened in being asked to write the foreword for this book **Renal Handling**

Nutritional Treatment of Chronic Renal Failure Sergio Giovannetti, 2012-12-06 Enormous progress has been made in the treatment of chronic renal failure over the last decades. Until the 1950s chronic renal failure was considered to be an inexorably lethal condition. This is no longer the case. In addition, the disease severe uremic syndrome is now extremely rare if existent at all in industrialized countries. Physicians of my generation who saw patients hospitalized with hemorrhages, pericarditis, severe anemia, cardiac failure, malignant hypertension, pruritus, vomiting, generalized edema and convulsions are particularly grateful for this progress. I will remember seeing such patients hospitalized in the last days or weeks of their lives and also remember the sense of impotence I suffered for the complete lack of efficient measures I had at my disposal to manage their condition. Nowadays hemodialysis, peritoneal dialysis and kidney transplantation allow patients with chronic renal failure to survive for very long periods of time in a satisfactory condition. Why then is there still a sense of dissatisfaction and why should we study dietary management? The drawbacks of dialysis and transplantation are the main reasons, but the certainty that dietary therapy is complementary to dialysis and even better than dialysis in certain conditions is also very important.

The Kidney and Body Fluids in Health and Disease Saulo Klahr, 2013-11-11 This volume was designed as a text for medical students, house officers and even clinicians. It deals with the most common problems in nephrology, providing new insight into how to improve clinical skills. A comprehensive overview of renal physiology and electrolyte disorders lays the groundwork for a clear presentation of the pathophysiological principles that underlie these disorders and a step by step presentation of the mechanisms behind the signs and symptoms of kidney failure. The origins of this book can be traced to the teaching of a Renal Pathophysiology course at the Washington University School of Medicine beginning in the mid 1960s. When changes in the medical school curriculum took place in the early 1970s, an effort was made to synthesize the minimum core curriculum for sophomore medical students and the distillation of essential material to be covered in the area of renal pathophysiology led to the development of the first edition of a renal syllabus. This syllabus has been used in our department since 1974 and following some of the recommendations and critiques of students and faculty it has been entirely reworked many times to improve its effectiveness and value. This book is a direct extension of that syllabus, integrated with contributions from faculty members in our Renal Division and expanded to include a section on therapy in most chapters. It is our hope that this format will serve the needs of not only sophomore and senior medical students but also house officers, nephrology fellows and clinicians.
