*Computational River Dynamics* Weiming Wu, 2007-11-15 Comprehensive text on the fundamentals of modeling flow and sediment transport in rivers treating both physical principles and numerical methods for various degrees of complexity Includes 1 D 2 D both depth and width averaged and 3 D models as well as the integration and coupling of these models Contains a broad selection

*Hydraulic Modelling: An Introduction* Pavel Novak, Vincent Guinot, Alan Jeffrey, Dominic E. Reeve, 2018-10-24 Modelling forms a vital part of all engineering design yet many hydraulic engineers are not fully aware of the assumptions they make These assumptions can have important consequences when choosing the best model to inform design decisions Considering the advantages and limitations of both physical and mathematical methods this book will help you identify the most appropriate form of analysis for the hydraulic engineering application in question All models require the knowledge of their background good data and careful interpretation and so this book also provides guidance on the range of accuracy to be expected of the model simulations and how they should be related to the prototype Applications to models include open channel systems closed conduit flows storm drainage systems estuaries coastal and nearshore structures hydraulic structures This an invaluable guide for students and professionals

**Montezuma Wetlands Project, Solano County**, 1998      **River Mechanics** Pierre Y. Julien, 2018-04-12 Completely updated and with three new chapters this analysis of river dynamics is invaluable for advanced students researchers and practitioners

**Sediment Matters** Peter Heininger, Johannes Cullmann, 2015-04-24 This book presents insights into the complex

processes controlling sediment behavior in river basins and into state of the art integrated sediment management concepts Main topics are sediment transport modelling sediment transfer in rivers sediment quality sediment monitoring and integrated sediment management at catchment scale Interlinkages of sediment dynamics and quality with biogeochemistry ecology climate change and human activities are discussed Drivers boundary conditions and processes of erosion sediment transport and sedimentation are presented with the aim to help the reader putting sediment quantity and quality issues into perspective

**Advances in Environmental Fluid Mechanics** Dragutin T. Mihailovic,2010 Environmental fluid mechanics EFM is the scientific study of transport dispersion and transformation processes in natural fluid flows on our planet Earth from the microscale to the planetary scale This book brings together scientists and engineers working in research institutions universities and academia who engage in the study of theoretical modeling measuring and software aspects in environmental fluid mechanics It provides a forum for the participants and exchanges new ideas and expertise through the presentations of up to date and recent overall achievements in this field

Hydrology and Water Resource Systems Analysis Maria A. Mimikou,Evangelos A. Baltas,Vassilios A. Tsihrintzis,2016-12-01 Hydrology and water resources analysis can be looked at together but this is the only book which presents the relevant material and which bridges the gap between scientific processes and applications in one text New methods and programs for solving hydrological problems are outlined in a concise and readily accessible form Hydrology and Water Resource Systems Analysis includes a number of illustrations and tables with fully solved example problems integrated within the text It describes a systematic treatment of various surface water estimation techniques and provides detailed treatment of theory and applications of groundwater flow for both steady state and unsteady state conditions time series analysis and hydrological simulation floodplain management reservoir and stream flow routing sedimentation and erosion hydraulics urban hydrology the hydrological design of basic hydraulic structures storage spillways and energy dissipation for flood control optimization techniques for water management projects and methods for uncertainty analysis It is written for advanced undergraduate and graduate students and for practitioners Hydrologists and water related professionals will be helped with an unfamiliar term or a new subject area or be given a formula the procedure for solving a problem or guidance on the computer packages which are available or shown how to obtain values from a table of data For them it is a compendium of hydrological practice rather than science but sufficient scientific background is provided to enable them to understand the hydrological processes in a given problem and to appreciate the limitations of the methods presented for solving it

**Environmental Hydraulics** Ioannis Tsanis,Jian Wu,Huihua Shen,Caterina Valeo,2007-03-26 Hydrodynamic and pollutant transport models are useful tools for evaluating remediation options for polluted water bodies These models span the range from highly theoretical fine resolution physically based designs to lumped black box representations of real world phenomena This book examines the numerical approaches used in hydrodynamic and pollutant transport modeling First the theory and physical basis of transport and mixing in lakes

and coastal waters are provided Methodologies that use a three dimensional 3D approach to predicting the fate and transport of pollutants are presented and this is followed by a presentation of alternatives to 3D circulation modeling as well as new advances in the field These alternatives offer near 3D accuracy but without the computational burden Illustrations of the calibration and verification of these models using laboratory data as well as field data are also provided The models are applied to a diverse array of study sites ranging from The Great Lakes in North America to the coastal areas of Northern Crete Presents the theory of hydrodynamic and pollutant transport modelling in lakes and coastal areas Thoroughly examines the issues and limitations of the numerical approaches used in hydrodynamic and pollutant transport modelling

Demonstrates the calibration and verification of hydrodynamic and pollutant transport models using laboratory and field data
