*Seeing Contour and Colour* J. J. Kulikowski, C. M. Dickinson, I. J. Murray, 1989      Colour Vision Deficiencies X B. Drum, J. D. Moreland, A. Serra, 2012-12-06 Since its inception the International Research Group on Colour Vision Deficiencies IRGCVD has followed the policy that the Symposium Proceedings should be as close as possible to a complete record of the scientific content of the meeting This policy has the advantage of providing an accurate picture of the current state of the art in research on color vision deficiencies but it also has the disadvantage that papers typically span a wide range of quality In this volume however we have instituted a system of peer review in an effort to enhance scientific quality as much as possible while continuing our past policy of publishing all submitted manuscripts In addition to being edited for English composition and grammar each of the papers included here has been carefully reviewed by an IRGCVD member selected for his or her expertise in the specific topic of the paper Reviewers were instructed to include in their comments suggestions for improvement rather than recommendation or rejection In our opinion this review process recommendations for publication has resulted in substantial improvement of many of the articles and has enhanced the value of the publication We are pleased to acknowledge the efforts of our reviewers and offer them our sincere thanks for their important contributions to Colour Vision Deficiencies X The Editors B Drum J D Moreland A Serra eds Colour Vision Deficiencies X p xiii      **Colour Vision Deficiencies XII** B. Drum, 2012-12-06 From the 98 presentations of the XIIth Symposium on Colour Vision Deficiencies 61 were selected after peer review and revision by the authors In addition to these contributions this volume contains a cumulative index to all authors in the IRGCVD proceedings since the first one in 1968 including the present volume The contents include contributions on basic questions of anatomical and electrophysiological organisation of the neural pathways underlying colour vision and on ways in which disturbances of these pathways can produce acquired colour vision deficiencies Further contributions deal with genetics and congenital red green colour deficiencies and colour vision testing The resulting publication contains much of interest to basic vision scientists as well as to specialists in colour vision deficiencies      The Visually Responsive Neuron T.P. Hicks, S. Molotchnikoff, T. Ono, 1993-03-18 This timely new volume presents broad based and wide ranging contributions on all aspects of vision The material is grouped for presentation in a logical fashion in five main themes peripheral processing sensory integration in superior colliculus organization of visual projections development and plasticity and neuronal encoding and visually guided behavior The material spans from molecules to cognition including overt behavior and synaptic and membrane levels of analysis The species studied also range over diverse phyla while contributors too form a diverse group representing Europe North America and Asia The Visually Responsive Neuron is an exciting and informative addition to the well known Progress in Brain Research series      **Colour Vision Deficiencies IX** B. Shevell,2003-07-11 The Science of Color focuses on the principles and observations that are foundations of modern color science Written for a general scientific audience the book broadly covers essential topics in the interdisciplinary field of color drawing from physics physiology and psychology This book comprises eight chapters and begins by tracing scientific thinking about color since the seventeenth century This historical perspective provides an introduction to the fundamental questions in color science by following advances as well as misconceptions over more than 300 years The next chapters then discuss the relationship between light the retinal image and photoreceptors followed by a focus on concepts such as color matching and color discrimination color appearance and color difference specification the physiology of color vision the 15 mechanisms of the physics and chemistry of color and digital color reproduction Each chapter begins with a short outline that summarizes the organization and breadth of its material The outlines are valuable guides to chapter structure and worth scanning even by readers who may not care to go through a chapter from start to finish This book will be of interest to scientists artists manufacturers and students

**Colour and Form Perception: Straddling the Boundary** Galina V. Paramei,Cees van Leeuwen,2016-05-31 Starting from psychophysics over the last 50 years most progress in unravelling the mechanisms of color vision has been made through the study of single cell responses mainly in LGN and striate cortex A similar development in the study of form perception may seem to be underway centred on the study of temporal cortex However because of the combinatorial

characteristics of form perception we are also observing the opposite tendency from single cell activity to population coding and from static receptive field structures to system dynamics and integration and ultimately a synthetic form of psychophysics of color and form perception From single cells to system integration it is this development the present Research Topic wishes to highlight and promote How does this development affect our views on the various attributes of perception In particular we are interested in to what extent evolving knowledge in the field of color perception is relevant within a developing integrative framework of form perception The goal of this Research Topic is to bring together experimental research encompassing both color and form perception For this volume we planned a broad scope of topics on color in complex scenes color and form as well as dynamic aspects of form perception We expect that the Research Topic will be attractive to the community of researchers whose work straddles the boundary between the two visual perception fields as well as to the wider community interested in integrative systems neuroscience

**Animal Signals** Yngve Espmark,Trond Amundsen,Gunilla Rosenqvist,2000 How can we explain the peacock s beautiful tail decorations or the wonderful song of the nightingale Why are some smells nice and others nasty How do animals signal their intentions and qualities to potential partners How do offspring tell parents about their needs Are signals tuned to the environment and to the mental abilities of receivers Essential for understanding how animals cope with their ecological and social environment the study of animal signals is one of the most active research areas in evolutionary biology Understanding

the signalling systems of nature has wide ranging relevance including biological conservation and human communication. Written by international scientists this is a comprehensive overview of the fascinating diversity of animal signals and signalling functions. Combining reviews and research the book is aimed at both students and professional scientists. **An**

**Introduction to the Theory of Perception** Sir John Herbert Parsons, 1927      **Vision and Art with Two Eyes** Nicholas Wade, 2023-06-02 This book celebrates binocular vision by presenting illustrations that require two eyes to see the effects of cooperation and competition between them. Pictures are flat but by printing them in different colours and viewing them through similarly coloured filters included with the hardcover book they are brought to life either in stereoscopic depth or in rivalry with one another. They are called anaglyphs and all those in the book display the ways in which the eyes interact. Thus the reader is an integral element in the book and not all readers will see the same things. The history, science and art of binocular vision can be experienced in ways that are not usually available to us and with images made specifically for this book. The study of vision with two eyes was transformed by the invention of stereoscopes in the early 19th century. Anaglyphs are simple forms of stereoscopes that have three possible outcomes from viewing them with each eye alone: to see the monocular images with both eyes to see them in stereoscopic depth or rivalry or without the red/cyan glasses where they can have an appeal independent of the binocularity they encompass. Through the binocular pictures and the words that accompany them there will be an appreciation of just how remarkable the processes are that yield binocular singleness and depth. Moreover the opportunities for expressing these processes are explored with many examples of truly binocular art.

*Human Color Vision* Jan Kremers, Rigmor C. Baraas, N. Justin Marshall, 2016-12-06 Our understanding of human color vision has advanced tremendously in recent years, helped along by many new discoveries, ideas and achievements. It is therefore timely that these new developments are brought together in a book assembled specifically to include new research and insight from the leaders in the field. Although intentionally not exhaustive, many aspects of color vision are discussed in this Springer Series in Vision Research book, including the genetics of the photopigments, the anatomy and physiology of photoreceptors, retinal and cortical pathways, color perception, the effects of disorders, theories on neuronal processes and the evolution of human color vision. Several of the chapters describe new state-of-the-art methods within genetics, morphology, imaging techniques, electrophysiology, psychophysics and computational neuroscience. The book gives a comprehensive overview of the different disciplines in human color vision in a way that makes it accessible to specialists and non-specialist scientists alike. About the Series: The Springer Series in Vision Research is a comprehensive update and overview of cutting-edge vision research, exploring in depth current breakthroughs at a conceptual level. It details the whole visual system from molecular processes to anatomy, physiology and behavior and covers both invertebrate and vertebrate organisms from terrestrial and aquatic habitats. Each book in the Series is aimed at all individuals with interests in vision, including advanced graduate students, post-doctoral researchers, established vision scientists and clinical investigators. The series editors are N
