*Seepage and Groundwater Effects Associated with Explosive Cratering* James Moyer Duncan, 1972 The report presents the results of a study of the groundwater and seepage conditions likely to be produced in the vicinity of explosively formed row craters The limitations of indirect methods for the determination of the permeability of fallback and rupture zones are evaluated Analyses of a range of possible groundwater conditions modelled by the finite element method are presented The shear strength characteristics of fallback and rupture zone materials are briefly considered The influence of seepage on the stability of crater slopes is discussed Modified author abstract      *Quantitative Assessment of Groundwater and Surface*

*Water Interactions in the Hailu River Basin, Erdos Plateau, China* Zhi Yang, 2018-04-17 This study presents a multi disciplinary approach for investigating the interactions between groundwater and surface water in the semi arid Hailu catchment in the Erdos Plateau Northwest China The study consists of statistical detection of river flow regime shifts at the basin level multiple in situ measurements for quantifying groundwater discharges using hydraulic hydrochemical and temperature methods at a local scale analysis and simulation of impacts of different land use scenarios on groundwater and surface water interactions at the sub catchment scale and the quantification of temporal and spatial groundwater and surface water interactions with hydrochemical tracers and modelling methods at the basin scale The study found that the river flow consists of mainly groundwater discharges at all scales The river flow regime has been intensively altered by human activities such as the construction of reservoirs water diversion groundwater exploitation and reforestation Water use by plants and crops consumes majority of the precipitation Groundwater sustains vegetation growth and feeds river discharges The water resources and ecosystem management priority should reduce evaporative water uses by promoting dry resistant plant species for vegetating sand dunes and lower irrigation demand crops for socio economic development Furthermore the Hailu River catchment must manage the groundwater recharge for water resource conservation and the maintenance of healthy ecosystems
