Monitoring the Comprehensive Nuclear-Test-Ban Treaty: Seismic Event Discrimination and Identification

William R. Walter, Hans E. Hartse, 2013-04-18 In September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban Treaty CTBT prohibiting nuclear explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data center and onsite inspections to verify compliance The problem of identifying small magnitude banned nuclear tests and discriminating between such tests and the background of earthquakes and mining related seismic events is a challenging research problem Because they emphasize CTBT verification research the 12 papers in this special volume primarily addresses regional data recorded by a variety of arrays broadband stations and temporarily deployed stations Nuclear explosions earthquakes mining related explosions mine collapses single charge and ripple fired chemical explosions from Europe Asia North Africa and North America are all studied While the primary emphasis is on short period body wave discriminants and associated source and path corrections research that focuses on long period data recorded at regional and teleseismic distances is also presented Hence these papers demonstrate how event identification research in support of CTBT monitoring has expanded in recent years to include a wide variety of event types data types geographic regions and statistical techniques *Analytical Methods for Nonproliferation* Edward C. Morse, 2016-04-04 This book is intended to be used as a textbook and research reference for the field of nuclear nonproliferation The book is primarily technical and focussed on methods of detecting clandestine nuclear material that might be illicitly transported The book also touches on nuclear forensics i e methods for identification attribution and establishment of transport pathways for illicit nuclear material Also covered are topics of methods used for arms control and treaty verification and an assessment of technologies under development for all of the above A description of the government and international agencies involved in nuclear terrorism prevention nuclear safeguards and arms control is also included Monitoring the Comprehensive Nuclear-Test-Ban Treaty Frode Ringdal, Brian L.N. Kennett, Catherine de Groot-Hedlin, John Orcutt, Howard J. Patton, Brian J. Mitchell, Göran Ekström, Marvin Denny, John R. Murphy, Anatoli L. Levshin, Michael H. Ritzwoller, William Walter, Hans E. Hatse, Zoltan A. Der, Robert H. Shumway, Eugene T. Herrin, 2002-09-26 In September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban Treaty CTBT prohibiting nuclear explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data centre IDC and on site inspections to verify compliance This set of 7 volumes contains research papers focusing on seismic event location hydroacoustics regional wave propagation and crustal structure source processes and explosion yield estimation surface waves seismic event

discrimination and identification data processing and infrasound in the CTBT context **American Book Publishing Record** ,2002 Forthcoming Books Rose Arny,2002 **Das Schweizer Buch** ,2003 *Deutsche Nationalbibliographie und Bibliographie der im Ausland erschienenen deutschsprachigen Veröffentlichungen* ,2002 **Monitoring the Comprehensive Nuclear-Test-Ban Treaty** Frode Ringdal,Brian L. N. Kennett,Brian Leslie Norman Kennett,2001 In September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban Treaty CTBT prohibiting nuclear explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data centre IDC and on site inspections to verify compliance This volume contains research papers focusing on seismic event location in the CTBT context The on site inspection protocol of the treaty specifies a search area not to exceed 1000 square km Much of the current research effort is therefore directed towards refining the accuracy of event location by including allowances for three dimensional structure within the Earth The aim is that the true location of each event will lie within the specified source zone regarding postulated location The papers in this volume cover many aspects of seismic event location including the development of algorithms suitable for use with three dimensional models allowances for regional structure use of calibration events and source specific station corrections They provide a broad overview of the current international effort to improve seismic event location accuracy and the editors hope that it will stimulate increased interest and further advances in this important field **Monitoring the Comprehensive Nuclear-Test-Ban Treaty: Surface Waves** Anatoli L. Levshin,Michael Ritzwoller,2012-12-06 On September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban Treaty CTBT prohibiting nuclear explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data center IDC and on site inspections to verify compliance Seismic methods play the lead role in monitoring the CTBT This volume concentrates on the measurement and use of surface waves in monitoring the CTBT Surface waves have three principal applications in CTBT monitoring to help discriminate nuclear explosions from other sources of seismic energy to provide mathematical characterizations of the seismic energy that emanates from seismic sources and to be used as data in inversion for the seismic velocity structure of the crust and uppermost mantle for locating small seismic events regionally The papers in this volume fall into two general categories the development and or application of methods to summarize information in surface waves and the use of these summaries to advance the art of surface wave identification measurement and source characterization These papers cut across essentially all of the major applications of surface waves to monitoring the CTBT This volume therefore provides a general introduction to the state of research in this area and should be useful as a guide for further exploration **Monitoring the Comprehensive Nuclear-Test-Ban Treaty: Source Location** Frode Ringdal,Brian L.N.
