

Monkey Moves

BEFORE READING

Display the book. Then with children, take a picture walk through the book. Ask children to tell what the monkeys are doing on each page. Invite children to predict what the book is about. Point out the cover photo. Tell children that the photo gives clues about the book.

READING

Set a purpose for reading by telling children they will learn about some of the ways that monkeys move or act. Read the book aloud and invite children to follow along.

Use questions such as these to help children follow the story:

- *Where do monkeys live?*
- *What part of their body helps them move?*
- *Do you think monkeys can move fast?*

AFTER READING

Discuss what children learned from the book. Create a list that compares how monkeys move and how another kind of animal moves, such as a *snake*. Invite children to brainstorm action words for the list. When the list is complete, pantomime the actions and have children guess the animal move.

Response Activities

What a Monkey Can Do

Materials: drawing paper, crayons, chart paper, marker

On chart paper write: *Monkeys _____*.

Provide examples of action words that could complete the sentence, such as *run*, *swing*, and so on. Then invite children to think of other action words that could complete the sentence. Write their responses on chart paper. Ask children to choose one of the sentences and to copy it onto their drawing paper and then illustrate the action.

Action Pictures

Materials: old magazines, art paper, glue, scissors, stapler, marker

Review with children what action words are. Then have pairs of children look through old magazines to find action pictures. Tell children to cut out the pictures and to glue them onto art paper. Staple the action pictures to a blank wall area. With children label each picture with its action word.

MINI LESSONS

• READING STRATEGY

Using Photos to Make Predictions

Display *Monkey Moves*. Point out the cover photo. Ask children to tell if the photo gave them a clue as to what the story was going to be about. Review the photos on the interior pages with the children. Ask children to make a prediction as to what the text says using each photo as a clue.

• LANGUAGE PATTERN

Recognizing Action Words

Refer to the action words in the story and list them on the board, such as *sit*, *leap*, *climb*, *swing*, *eat*, *sleep*, and *hug*. Read the words aloud. Explain that these words tell what monkeys do. With children list other action words, such as *hop*, *run*, *jump*, and *dance*. Then have children sort the actions to help create a new chart titled: *Inside Actions*, *Outside Actions*.

PHONEMIC/PHONICS FOCUS

Recognizing Rhythmic Beats

Read aloud page 2 from *Monkey Moves*. Write the words on chart paper (*monkeys sit*). Say the words aloud, emphasizing the beats in each word. Count the beats aloud (3). Ask children to clap out the beats as you read the sentence aloud. Then read the other sentences in the book aloud and ask children to clap the beats.

From Atoms to Galaxies Sadri Hassani, 2011-06-13 College students in the United States are becoming increasingly incapable of differentiating between proven facts delivered by scientific inquiry and the speculations of pseudoscience In an effort to help stem this disturbing trend From Atoms to Galaxies A Conceptual Physics Approach to Scientific Awareness teaches heightened scientific acuity as it educates students about the physical world and gives them answers to questions large and small Written by Sadri Hassani the author of several mathematical physics textbooks this work covers the essentials of modern physics in a way that is as thorough as it is compelling and accessible Some of you might want to know How did Galileo come to think about the first law of motion Did Newton actually discover gravity by way of an apple and an accident Or maybe you have mulled over Is it possible for Santa Claus to deliver all his toys Is it possible to prove that Elvis does not visit Graceland every midnight Or perhaps you ve even wondered If ancient Taoism really parallels modern physics If psychoanalysis can actually be called a science How it is that some philosophies of science may imply that a 650 year old woman can give birth to a child No Advanced Mathematics Required A primary textbook for undergraduate students not majoring in physics From Atoms to Galaxies examines physical laws and their consequences from a conceptual perspective that requires no advanced mathematics It explains quantum physics relativity nuclear and particle physics gauge theory quantum field theory quarks and leptons and cosmology Encouraging students to subscribe to proven causation rather than dramatic speculation the book Defines the often obscured difference between science and technology discussing how this confusion taints both common culture and academic rigor Explores the various philosophies of science demonstrating how errors in our understanding of scientific principles can adversely impact scientific awareness Exposes how pseudoscience and New Age mysticism advance unproven conjectures as dangerous alternatives to proven science Based on courses taught by the author for over 15 years this textbook has been developed to raise the scientific awareness of the untrained reader who lacks a technical or mathematical background To accomplish this the book lays the foundation of the laws that govern

our universe in a nontechnical way emphasizing topics that excite the mind namely those taken from modern physics and exposing the abuses made of them by the New Age gurus and other mystagogues It outlines the methods developed by physicists for the scientific investigation of nature and contrasts them with those developed by the outsiders who claim to be the owners of scientific methodology Each chapter includes essays which use the material developed in that chapter to debunk misconceptions clarify the nature of science and explore the history of physics as it relates to the development of ideas Noting the damage incurred by confusing science and technology the book strives to help the reader to emphatically demarcate the two while clearly demonstrating that science is the only element capable of advancing technology **Letter**

Inferior Angela Saini, 2017-05-30 What science has gotten so shamefully wrong about women and the fight by both female and male scientists to rewrite what we thought we knew For hundreds of years it was common sense women were the inferior sex Their bodies were weaker their minds feeble their role subservient No less a scientist than Charles Darwin asserted that women were at a lower stage of evolution and for decades scientists most of them male of course claimed to find evidence to support this Whether looking at intelligence or emotion cognition or behavior science has continued to tell us that men and women are fundamentally different Biologists claim that women are better suited to raising families or are more gently uniquely empathetic Men on the other hand continue to be described as excelling at tasks that require logic spatial reasoning and motor skills But a huge wave of research is now revealing an alternative version of what we thought we knew The new woman revealed by this scientific data is as strong strategic and smart as anyone else In *Inferior* acclaimed science writer Angela Saini weaves together a fascinating and sorely necessary new science of women As Saini takes readers on a journey to uncover science's failure to understand women she finds that we're still living with the legacy of an establishment that's just beginning to recover from centuries of entrenched exclusion and prejudice Sexist assumptions are stubbornly persistent even in recent years researchers have insisted that women are choosy and monogamous while men are naturally promiscuous or that the way men's and women's brains are wired confirms long discredited gender stereotypes As Saini reveals however groundbreaking research is finally rediscovering women's bodies and minds *Inferior* investigates the gender wars in biology psychology and anthropology and delves into cutting edge scientific studies to uncover a fascinating new portrait of women's brains bodies and role in human evolution
