Monoclonal and Anti-Idiotypic Antibodies J. Craig Venter, Claire M. Fraser, Jon Lindstrom, 1984-11-01 Membrane Receptors, Dynamics, and Energetics K. Wirtz, 2012-12-06 **Monoclonal and Anti-idiotypic Antibodies** J. Craig Venter, Claire M. Fraser, Jon Lindstrom, 1984 *Monoclonal Antibodies* Mary A. Ritter, Heather M. Ladyman, 1995-01-26 This book aims to provide a unique combination of the production by both cellular and molecular biology techniques structure and functional characteristics of monoclonal antibodies together with detailed discussions of the various analytic diagnostic and therapeutic applications *Anti-Idiotypes, Receptors, and Molecular Mimicry* D. Scott Linthicum, Nadir R. Farid, 2012-12-06 Here is an up to date review of important new methods and results in anti idiotypes receptors and molecular mimicry It begins with a discussion of the theoretical background of the anti idiotypic network it s role in the regulation of immune response and the physical characteristics of anti idiotypic antibodies It then goes on to explore many exciting applications in such areas as insulin action thyroid cell function the neurosciences cardiology virology pharmacology and reproduction *Molecular Medical Biochemistry* J. P. Luzio, R. J. Thompson, 1990-02-22 The many exciting developments in cell and molecular biology in recent years have important implications for the practice of medicine The purpose of this new text is to bring these developments to the attention of undergraduates taking courses in biochemistry The emphasis is on topics membrane structure and function hormone action and secretion where current knowledge of macromolecular and cellular structure and function is likely to contribute most to understanding the underlying pathology of common multifactorial diseases The book also outlines the basic features of recombinant DNA techniques and the impact they are having in the diagnosis treatment and knowledge of disease processes Ion Channel Reconstitution C. Miller, 2013-11-09 It is now over 30 years since the idea of ion conducting pores burst on the elec trophysiological scene 15 years since these were generally realized to be mem brane spanning proteins and 10 years since the first observations of single ion channels from higher organisms were made During the past 5 years several integral membrane channel proteins have been purified in a functionally competent state the nicotinic acetylcholine receptor the Na channel mitochondrial VDAC and a variety of porins The stage is thus set to attack ion channels in the same ways that biochemists have been attacking enzymes for decades isolation followed by functional analysis in as simple a system as possible with a view towards understanding the molecular mechanisms of the protein s behavior and how this is related to the underlying molecular structure This is always a daunting task all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in iso lating functionally active channel proteins In this volume which can be considered a biochemically slanted companion to Sakmann and Neher s *Single Channel Recording* I have tried to present a view of the current landscape of ion channel reconstitution These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but as importantly the varied motivations for doing this kind of work

NIDA Research Monograph ,1976 **The Calcium Channel: Structure, Function and Implications** Martin Morad, Winifred G. Nayler, Stanislav Kazda, Matthias Schramm, 2012-12-06 This is the first book to summarize experimental results from the new rapidly expanding field of research into the calcium channel in cell membrane. Calcium is an ubiquitous messenger of various cellular functions. Its fundamental role in the regulation of cardiac contractions has long been recognized. Drugs counteracting some actions of calcium ions, namely calcium antagonists, have since become essential to research. In the last decade it has been established that calcium ions reach their target intracellular system by passing through specialized calcium channels in the membrane. Recently improved experimental techniques combined with the discovery of highly specific Ca channel ligands have dramatically enlarged our knowledge of the molecular structure and function of such channels. The contributions by leading world specialists shed new light on both basic science and possible clinical implications for cardiovascular pharmacology, endocrinology, and neuropharmacology. **Progress in Opioid Research** John W. Holaday, Ping-Yee Law, Albert Herz, 1986
