The Philosophy of Psychology William O'Donohue, Richard F Kitchener, 1996-10-30 This major text provides the first comprehensive anthology of the key topics arising in the philosophy of psychology Bringing together internationally renowned authors including Herb Simon Karl Pribram Joseph Rychlak Ullin T Place and Adolf Gr um unbaum this volume offers a stimulating and informative addition to contemporary debate With the cognitive revolution of the 1960s there has been a resurgence of interest in the study of the philosophical assumptions and implications of psychology Several significant themes such as the foundations of knowledge behaviourism rationality emotion and cognitive science span both philosophy and psychology and are covered here along with a wide range of issues in the fields of folk psychology clinical psychology neurophysiology and professional ethics **Jean Piaget** Webster R. Callaway, 2001 Jean Piaget is often considered to be one of the most important thinkers of the 20th century in the field of cognition The author of this book challenges Piaget s frequent dual use of the meanings of words within the same paragraph Extensive comparisons and examples of this extraordinary phenomenon are presented Conclusions are offered to explain Piaget s intent Contents Introduction The Absolute Subject Piaget s Dual System The Marvellous Monad Activities of the Absolute Appendix Bibliography *The Birth of Twentieth-Century Chinese Literature* Yu Gao, 2017-10-09 This study makes a linguistic case for the twentieth century revolution in Chinese language and literature It offers a history of reform and change in the Chinese language throughout the country s history and focuses on the concept of baihua a language reform movement championed by Hu Shi and other scholars which laid the foundation for the May fourth New Literature Movement the larger New Culture Movement and

which now defines modern Chinese Examining the differences between classical and modern Chinese language systems alongside an investigation into the relevance and impact of translation in this language revolution notably addressing the pivotal role of May Fourth leader Lu Xun this book provides a rare insight into the evolution of the Chinese language and those who championed its development *The ECPH Encyclopedia of Psychology*, 2025-01-11 This encyclopedia volume comprehensively reflects the basic knowledge and the latest research results in the field of psychology In this reference book the knowledge system basic concepts basic theories as well as important figures representative works and institutions of psychology are well organized in encyclopedic entries The whole work includes more than 1 300 entries and about 570 figures making it a full and detailed introduction to the origin and development of psychology Whitehead's Pancreativism Michel Weber, 2013-05-02 Whitehead's Pancreativism The Basics has provided tools to understand Whitehead secundum Whitehead We now seek to bring him in dialogue with James It will be a pragmatic dialogue looking for two types of synergy to establish the relevance of a Jamesian background to read Whitehead and to adumbrate how Whitehead can help us understand the stakes of James's works After one hundred years of scholarship it appears that James's legacy has mainly been studied from the perspective of his own blend of pragmatism and that this blend has moreover chiefly been put into dialogue with Peirce and analytic philosophy at large This double interpretational shift has allowed James to keep a fair amount of visibility on the academic scene but over the years it has significantly obliterated his vision It is time to rediscover James from the perspective of his radical empiricism *Reductionism and the Development of Knowledge* Terrance Brown, Leslie Smith, 2003-01-30 The papers collected in this volume are all derived from the 29th Annual Symposium of JPS The intent of the volume is to examine the issue of reductionism on the theoretical level in several sciences including biology psychology sociology *The Nature of the Chemical Concept* Keith S Taber, 2019-04-29 This book offers a step by step analysis and discussion of just why some students find chemistry difficult by examining the nature of chemistry concepts and how they are communicated and learnt The Biologising of Childhood John R. Morss, 2017-12-06 Originally published in 1990 this book looks at the history of developmental psychology in order to locate and evaluate the role played by biology in its most influential formulations First Charles Darwin's own writings on child development are examined It is shown that Darwin endorsed such ideas as the recapitulation of evolutionary ancestry in the developing child even though this is inconsistent with his natural selection theory The first great developmentalists Hall Baldwin Freud adopted and applied these non Darwinian evolutionist ideas The next generation Vygotsky Piaget Werner applied similar ideas in a variety of ways Alongside this evolutionism but interconnected with it sensationist empiricist forms of epistemology were directing developmentalists from Rousseau onwards to see the child as having to work himself out of sense bound experience to develop further and further from the here and now Contemporary developmental theory retains these influences biological approaches ethological psychobiological remain pre Darwinian in spirit lifespan theories remain attached to biology formal

cognitive approaches remain attached to sensationism Social context approaches are rather half hearted and it is only the social constructionist orientation which seems to offer a real alternative to biology Major conclusions are stated in chapter ten which includes a re evaluation of Darwin s role
