Principles Of Military Communication Systems:

Principles of Military Communication Systems Don J. Torrieri, 1981 *Tactical Communications for the Digitized Battlefield* Michael J. Ryan, Michael R. Frater, 2002 Traditional tactical communications systems consist of a number of separate subsystems with little interworking between them and with external sensors and weapons systems Combat net radio CNR has provided the high mobility communications required by combat troops while trunk communications systems have provided high capacity communications between headquarters at the expense of mobility The focus of this book is on new information age technologies that promise to offer seamless integration of real time data sharing creating a single logical network architecture to facilitate the movement of data throughout the battlespace Because the structure of this network is constrained by the fundamental trade off between range mobility and capacity that applies to all communications systems this network is unlikely to be based on a single network technology This book presents an architecture for this network and shows how its subsystems can be integrated to form a single logical network *Digital Signal Processing in Communications Systems* Marvin Frerking, 2013-03-14 An engineer's introduction to concepts algorithms and advancements in Digital Signal Processing This lucidly written resource makes extensive use of real world examples as it covers all the important design and engineering references Principles of Military Communications for C3I (Command, Control, Communications and Intelligence). Digital Satellite Communications Systems and Technologies A. Nejat Ince, 2012-12-06 Among the space activities of the last three decades satellite communications SATCOM has found the widest application in meeting both civil and military communications requirements Several international regional and national SATCOM systems of increasing capacity capability and complexity have been and are being implemented over the years The latest versions are utilizing such concepts as spot beams processing transponders in SS TDMA and operations in different frequency bands including the EHF band On the military side the United States of America the United Kingdom France and NATO the North Atlantic Treaty Organisation have been the only owners and operators of military SATCOM systems in the West The systems in being and under development use satellites and ground terminals with characteristics which differ from the civilian ones with respect to frequency bands utilised and survivability and interoperability The SATCOM has given the military users the potential of having much needed mobility flexibility and survivability in strategic and tactical communications for land sea and air operations It must however be said particularly for the military SATCOM systems that they have been evolved in big jumps both in time and capability each jump involving the deployment of two or three often specially designed large satellites large
