The goal is to build the very core of basic principles in the shortest possible time without underestimating the breadth and depth of this discipline. The Fourth Edition includes Controversies in Critical Care boxes in many chapters which briefly summarize opposing arguments on controversial points. Other highlights include enhanced discussion of CT for abdominal disorders, new ACLS guidelines and new material on removable IVC filters, interventional radiologic techniques for GI bleeding and use of vascular ultrasound.

The updated coverage includes new information on fetal assessment, survival of premature infants and perinatal asphyxia and new guidelines on neonatal jaundice. The popular appendices include effects of maternal drugs on the fetus, maternal medications during lactation and NICU medication guidelines.
