**Requirements for the Doctor's Degree** Cornell University, 1925      *Formal Methods and Software Engineering* Karin Breitman, Ana Cavalcanti, 2009-11-18 Formal methods for development of computer systems have been extensively studied over the years. A range of semantic theories, specification languages, design techniques and verification methods and tools have been developed and applied to the construction of programs used in critical applications. The challenge now is to scale up formal methods and integrate them into engineering development processes for the correct and efficient construction and maintenance of computer systems in general. This requires us to improve the state of the art on approaches and techniques for integration of formal methods into industrial engineering practice including new and emerging practice. The now long established series of International Conferences on Formal Engineering Methods brings together those interested in the application of formal engineering methods to computer systems. Researchers and practitioners from industry, academia and government are encouraged to attend and to help advance the state of the art. This volume contains the papers presented at ICFEM 2009, the 11th International Conference on Formal Engineering Methods held during December 9-11 in Rio de Janeiro, Brazil.      Journal of Health, Physical Education, Recreation, 1963      Web Information Systems and Technologies José Cordeiro, Slimane Hammoudi, Joaquim Filipe, 2009-04-30 This book contains a selection of the best papers from WEBIST 2008, the Fourth International Conference on Web Information Systems and Technologies held in Funchal, Madeira, in 2008, organized by the Institute for Systems and Technologies of Information Control and Communication (INSTICC) and co-sponsored by the Workflow Management Coalition (WfMC). The purpose of the WEBIST series of conferences is to bring together researchers, engineers and practitioners interested in the technological advances and business applications of web-based information systems. The series focuses on four main topic areas covering different aspects of web information systems including internet technology, web interfaces and applications, society, e-business and e-government and e-learning. WEBIST 2008 received 238 paper submissions from more than 40 countries on all continents. A double-blind review process was enforced with the help of more than 200 experts from the international Program Committee, each of them specialized in one of the main conference topic areas. After reviewing 32 papers were selected to be published and presented as full papers and 64 additional papers describing work progress as short papers for oral presentation only. Furthermore, 58 papers were presented as posters. The full paper acceptance ratio was 13% and the total oral paper acceptance ratio was 40%. Therefore, we hope that you find the papers included in this book interesting and we trust they may represent a helpful reference in the future for all those who need to address any of the research areas mentioned above.      **University of Minnesota Bulletin** Minnesota.
