Principles of Database and Knowledge Base Systems Jeffrey D. Ullman, 1988 Database and Expert Systems Applications Dimitris Karagiannis, 1994-08-24 This volume constitutes the proceedings of the 5th International Conference on Database and Expert Systems Applications DEXA 94 held in Athens Greece in September 1994 The 78 papers presented were selected from more than 300 submissions and give a comprehensive view of advanced applications of databases and expert systems Among the topics covered are object oriented temporal active geographical hypermedia and distributed databases data management cooperative office applications object oriented modelling industrial applications conceptual modelling legal systems evolving environments knowledge engineering information retrieval advanced querying medical systems and CIM

Introduction To Database And Knowledge-base Systems S Krishna, 1992-03-26 This book provides a comprehensive yet concise coverage of the concepts and technology of database systems and their evolution into knowledge bases The traditional material on database systems at senior undergraduate level is covered An understanding of concepts is emphasized avoiding extremes in formalism or detail Rather than be restricted to a single example used over an entire book a variety of examples are used These enable the reader to understand the basic abstractions which underlie description of many practical situations A major portion of the book concerns database system technology with focus on the relational model Various topics are discussed in detail preparing the ground for more advanced work **The Froehlich/Kent**

Encyclopedia of Telecommunications Fritz E. Froehlich, Allen Kent, 1992-09-25 The only continuing source that helps users analyze plan design evaluate and manage integrated telecommunications networks systems and services The Froehlich Kent Encyclopedia of Telecommunications presents both basic and technologically advanced knowledge in the field An ideal reference source for both newcomers as well as seasoned specialists the Encyclopedia covers seven key areas Terminals and Interfaces Transmission Switching Routing and Flow Control Networks and Network Control Communications Software and Protocols Network and system Management and Components and Processes *LOGIDATA+: Deductive Databases with*

Complex Objects Paolo Atzeni, 1993-07-29 This book presents a collection of coordinated scientific papers describing the work conducted and the results achieved within the LOGIDATA project a research action funded by the Italian national research council CNR The aim of the LOGIDATA project is the definition of advanced database systems which significantly extend the functionalities of the current systems with specific reference to the application areas for which relational systems are not considered satisfactory These new systems will allow the definition of data with complex structures the representation of semantic relationships between objects and the use of powerful query and update languages They will be based on a combination of techniques originating from relational databases and logic programming with contributions from object oriented programming The goal of the LOGIDATA project is the design definition and prototype implementation of a database management system with complex structures and a class hierarchy to be accessed through a rule based language

This book presents an integrated view of the project at the end of the first phase The second phase will be mainly concerned with the implementation of prototypes

Flexible Query Answering Systems Henrik Legind Larsen,1998 This book constitutes the thoroughly refereed post workshop proceedings of the Third International Conference on Flexible Query Answering Systems FQAS 98 held in Roskilde Denmark in May 1998 The 32 revised papers presented were carefully reviewed and went through two rounds of selection for inclusion in the proceedings This book is the first one focused on flexible query answering systems this emerging area of research and development builds on results from mathematical logic fuzzy logic various database paradigms information retrieval linguistics and human computer interaction The papers deal with issues occurring in querying databases and the Internet

Logic Programming John Lloyd,1995 The International Logic Programming Symposium is one of two major international conferences sponsored by the Association of Logic Programming Both conferences are held annually The theme for the 1995 conference was Declarative Systems particularly the integration of the logic programming functional programming and object oriented programming paradigms

Logical Foundations for Rule-Based Systems Antoni Ligeza,2006-01-25 Thinking in terms of facts and rules is perhaps one of the most common ways of approaching problem definition and problem solving both in everyday life and under more formal circumstances The best known set of rules the Ten Commandments have been accompanying us since the times of Moses the Decalogue proved to be simple but powerful concise and universal It is logically consistent and complete There are also many other attempts to impose rule based regulations in almost all areas of life including professional work education medical services taxes etc Some most typical examples may include various codes e g legal or traffic code regulations especially military ones and many systems of customary or informal rules The universal nature of rule based formulation of behavior or inference principles follows from the concept of rules being a simple and intuitive yet powerful concept of very high expressive power Moreover rules as such encode in fact functional aspects of behavior and can be used for modeling numerous phenomena

Conceptual Modeling of Information Systems Antoni Olivé,2007-08-15 It is now more than fifty years since the first paper on formal specifications of an information system was published by Young and Kent Even if the term conceptual model was not used at that time the basic intention of the abstract specification was to a large extent the same as for developing conceptual models today to arrive at a precise abstract and hardware dependent model of the informational and time characteristics of a data processing problem The abstract notation should enable the analyst to organize the problem around any piece of hardware In other words the purpose of an abstract specification was for it to be used as an invariant basis for designing different alternative implementations perhaps even using different hardware components Research and practice of abstract modeling of information systems has since the late fifties progressed through many milestones and achievements In the sixties pioneering work was carried out by the CODASYL Development committee who in 1962 presented the Information Algebra At about the same time Bjarne Langefors published his elementary message and e file

approach to specification of information systems The next decade the seventies was characterized by the introduction of a large number of new types of as they were called data models We saw the birth of for instance Binary Data Models Entity Relationship Models Relational Data Models Semantic Data Models and Temporal Deductive Models Real-Time Database Systems Azer Bestavros,Kwei-Jay Lin,Sang Hyuk Son,2012-12-06 Despite the growing interest in Real Time Database Systems there is no single book that acts as a reference to academics professionals and practitioners who wish to understand the issues involved in the design and development of RTDBS Real Time Database Systems Issues and Applications fulfills this need This book presents the spectrum of issues that may arise in various real time database applications the available solutions and technologies that may be used to address these issues and the open problems that need to be tackled in the future With rapid advances in this area several concepts have been proposed without a widely accepted consensus on their definitions and implications To address this need the first chapter is an introduction to the key RTDBS concepts and definitions which is followed by a survey of the state of the art in RTDBS research and practice The remainder of the book consists of four sections models and paradigms applications and benchmarks scheduling and concurrency control and experimental systems The chapters in each section are contributed by experts in the respective areas Real Time Database Systems Issues and Applications is primarily intended for practicing engineers and researchers working in the growing area of real time database systems For practitioners the book will provide a much needed bridge for technology transfer and continued education For researchers this book will provide a comprehensive reference for well established results This book can also be used in a senior or graduate level course on real time systems real time database systems and database systems or closely related courses **Logic for Programming and Automated Reasoning** Michel Parigot,Andrei

Voronkov,2003-07-31 This book constitutes the refereed proceedings of the 7th International Conference on Logic for Programming and Automated Reasoning LPAR 2000 held in Reunion Island France in November 2000 The 26 revised full papers presented together with four invited contributions were carefully reviewed and selected from 65 submissions The papers are organized in topical sections on nonmonotonic reasoning descriptive complexity specification and automatic proof assistants theorem proving verification logic programming and constraint logic programming nonclassical logics and the lambda calculus logic and databases program analysis mu calculus planning and reasoning about actions **Foundations of Intelligent Systems** Floriana Esposito,Zbigniew W Ras,Donato Malerba,Giovanni Semeraro,2006-09-22 This book constitutes the refereed proceedings of the 16th International Symposium on Methodologies for Intelligent Systems ISMIS 2006 The book presents 81 revised papers together with 3 invited papers Topical sections include active media human computer interaction computational intelligence intelligent agent technology intelligent information retrieval intelligent information systems knowledge representation and integration knowledge discovery and data mining logic for AI and logic programming machine learning text mining and Web intelligence *Encyclopedia of Computer Science and Technology*

Allen Kent, James G. Williams, 1991-03-29 This comprehensive reference work provides immediate fingertip access to state of the art technology in nearly 700 self contained articles written by over 900 international authorities Each article in the Encyclopedia features current developments and trends in computers software vendors and applications extensive bibliographies of leading figures in the field such as Samuel Alexander John von Neumann and Norbert Wiener and in depth analysis of future directions

Deductive Databases and Their Applications Robert Colomb, 2003-09-02 Deductive Databases and their Applications is an introductory text aimed at undergraduate students with some knowledge of database and information systems The text comes complete with exercises and solutions to encourage students to tackle problems practically as well as theoretically The author presents the origins of deductive databases in Prologue before proceeding to analyse the main deductive database paradigm the data log model The final chapters are dedicated to closely related topics such as prepositional expert systems integrity constraint specification and evaluation and update propagation Particular attention is paid to CASE tool repositories

Logics for Databases and Information Systems Jan Chomicki, Gunter Saake, 2012-12-06 Time is ubiquitous in information systems Almost every enterprise faces the problem of its data becoming out of date However such data is often valuable so it should be archived and some means to access it should be provided Also some data may be inherently historical e g medical cadastral or judicial records Temporal databases provide a uniform and systematic way of dealing with historical data Many languages have been proposed for temporal databases among others temporal logic Temporal logic combines abstract formal semantics with the amenability to efficient implementation This chapter shows how temporal logic can be used in temporal database applications Rather than presenting new results we report on recent developments and survey the field in a systematic way using a unified formal framework GHR94 Ch094

The handbook GHR94 is a comprehensive reference on mathematical foundations of temporal logic In this chapter we study how temporal logic is used as a query and integrity constraint language Consequently model theoretic notions particularly for formula satisfaction are of primary interest Axiomatic systems and proof methods for temporal logic GHR94 have found so far relatively few applications in the context of information systems Moreover one needs to bear in mind that for the standard linearly ordered time domains temporal logic is not recursively axiomatizable GHR94 so recursive axiomatizations are by necessity incomplete

Theoretical Aspects of Computer Software Masami Hagiya, John C. Mitchell, 1994-03-30 This volume contains the proceedings of the Second International Symposium on Theoretical Aspects of Computer Science held at Tohoku University Japan in April 1994 This top level international symposium on theoretical computer science is devoted to theoretical aspects of programming programming languages and system and parallel and distributed computation The papers in the volume are grouped into sessions on lambda calculus and programming automated deduction functional programming objects and assignments concurrency term rewriting and process equivalence type theory and programming algebra categories and linear logic and subtyping intersection and union types The volume also includes seven invited talks and two

open lectures Security and Privacy in User Modeling J. Schreck, 2013-03-14 User adaptive or personalized systems take individual characteristics of their current users into account and adapt their behavior accordingly Several empirical studies demonstrate their benefits in areas like education and training online help for complex software dynamic information delivery provision of computer access to people with disabilities and to some extent information retrieval Recently personalized systems have also started to appear on the World Wide Web where they are primarily used for customer relationship management The aim hereby is to provide value to customers by serving them as individuals and by offering them a unique personal relationship with the business Studies show that web visitors indeed spend considerably more time at personalized than at regular portals and view considerably more web pages Personalized sites in general also draw more visitors and turn more visitors into buyers Personalization therefore would look like a win win technology for both consumers and online businesses However it has a major downside in order to be able to exhibit personalized behavior user adaptive systems have to collect considerable amounts of personal data and lay them in stock for possible future usage Moreover the collection of information about the user is often performed in a relatively inconspicuous manner such as by monitoring users web navigation behavior in order not to distract users from their tasks Advances in Database Technology EDBT '96 Mokrane Bouzeghoub, Georges Gardarin, 1996-03-18 This book presents the refereed proceedings of the Fifth International Conference on Extending Database Technology EDBT 96 held in Avignon France in March 1996 The 31 full revised papers included were selected from a total of 178 submissions also included are some industrial track papers contributed by partners of several ESPRIT projects The volume is organized in topical sections on data mining active databases design tools advanced DBMS optimization warehousing system issues temporal databases the web and hypermedia performance workflow management database design and parallel databases **Soft Computing and Human-Centered Machines** Z.-Q. Liu, S. Miyamoto, 2012-12-06 Computer Science Workbench is a monograph series which will provide you with an in depth working knowledge of current developments in computer technology Every volume in this series will deal with a topic of importance in computer science and elaborate on how you yourself can build systems related to the main theme You will be able to develop a variety of systems including computer software tools computer graphics computer animation database management systems and computer aided design and manufacturing systems Computer Science Workbench represents an important new contribution in the field of practical computer technology Tosiyasu L Kunii Preface With the advent of digital computers some five decades ago and the wide spread use of computer networks recently we have gained enormous power in gathering information and manufacturing Yet this increase in computing power has not given us freedom in a real sense we are increasingly enslaved by the very machine we built for gaining freedom and efficiency Making machines to serve mankind is an essential issue we are facing Building human centered systems is an imperative task for scientists and engineers in the new millennium The topic of human centered servant modules covers a vast area In our projects we have

focused our efforts on developing theories and techniques based on fuzzy theories Chapters 2 to 12 in this book collectively deal with the theoretical methodological and applicational aspects of human centered systems Each chapter presents the most recent research results by the authors on a particular topic

Data Mining and Reverse Engineering Stefano Spaccapietra, Fred Maryanski, 2013-03-14 Searching for Semantics Data Mining Reverse Engineering Stefano Spaccapietra Fred Maryanski Swiss Federal Institute of Technology University of Connecticut Lausanne Switzerland Storrs CT USA

REVIEW AND FUTURE DIRECTIONS In the last few years database semantics research has turned sharply from a highly theoretical domain to one with more focus on practical aspects The DS 7 Working Conference held in October 1997 in Leysin Switzerland demonstrated the more pragmatic orientation of the current generation of leading researchers The papers presented at the meeting emphasized the two major areas the discovery of semantics and semantic data modeling The work in the latter category indicates that although object oriented database management systems have emerged as commercially viable products many fundamental modeling issues require further investigation Today's object oriented systems provide the capability to describe complex objects and include techniques for mapping from a relational database to objects However we must further explore the expression of information regarding the dimensions of time and space Semantic models possess the richness to describe systems containing spatial and temporal data The challenge of incorporating these features in a manner that promotes efficient manipulation by the subject specialist still requires extensive development
