Principles Of Dispersal In Higher Plants:

Principles of Dispersal in Higher Plants L. van der Pijl, 2012-12-06 Reviewers from diverse branches of botany have exerted pressure to have chapters dealing with their field extended If only to cover his incompetence the author could not accede to these requests Nor was it possible to respond to Eastern European urgings to extend the classificatory terminology especially in ChapterX He is grateful for indications of factual shortcomings in the chosen field especially for those by Dr RUDOLF SCHMID Ann Arbor who provided exten sive comment L VAN DER PILL The Hague spring 1972 Preface to the First Edition The work offered here is a companion volume to the work by K FAEGRI and 1 VAN DER PIJL Principles of Pollination Ecology whim deals with the preceding phase of reproduction in plants In the present work too the emphasis is on principles and ecology It is neither an enumeration of mechanisms nor a compilation of cases RIDLEY S monumental work The Dispersal of Plants Throughout the World comprises 700 large pages of small print and research has proceeded since then Though this work is more than just a compilation and contains much insight and thoughts on principles in addition to reviews its completeness hinders its use as a text book As a reference work it is unsurpassed and the writer made frequent use of it The writer paid special attention to functional backgrounds for the use of taxonomists working with characters and to biosystematics at the macro level Principles of Dispersal in Higher Plants Leendert van der Pijl,1982 **Dispersal in Higher Plants** Leendert van der Pvl,1969 **Principles of Dispersal In Higher Plants** L. V. D. Piji,1967 Principles of dispersal in higher plants Leendet van der Pijl,1969 **Embryology of Flowering Plants: Terminology** and Concepts, Vol. 3 T B Batygina, 2019-04-23 Plant embryology dealing with the regularities of initiation and the first stages of development of an organism is now flourishing because of the overall progress being made in natural sciences Such discoveries of the 20th century as production of plants from a single somatic cell experimental haploidy and parasexual hybridization were of general biological significance. The combined efforts of embryologists geneticists and molecular biologists yielded the discovery of specific genes that control meiosis egg cell development and early stages of embryogenesis The tendency to synthesize data of embryology and genetics has become increasingly noticeable It is connected with the fact that the majority of problems connected with morphogenesis such as differentiation specialization the evaluation of features and the definition of the notions gene and feature and genotype and phenotype concern embryology and genetics embryogenetics in one way or another Evolutionary embryology has given rise to a new approach to the study of problems of adaptation in plants In connection with the problem of preserving biological diversity under conditions of ecological stress special attention is paid to ecological embryology revealing the critical periods in early ontogenesis and plasticity and tolerance of reproductive systems at the level of species and population The study of variability of morphogenesis and phenotype in population life cycle variations and the diversity of reproductive systems is the most important point in the population embryology of plants Encyclopedia of Deserts Michael A. Mares, 2017-01-19

Encyclopedia of Deserts represents a milestone it is the first comprehensive reference to the first comprehensive reference to deserts and semideserts of the world Approximately seven hundred entries treat subjects ranging from desert survival to the way deserts are formed Topics include biology birds mammals reptiles amphibians fishes invertebrates plants bacteria physiology evolution geography climatology geology hydrology anthropology and history The thirty seven contributors including volume editor Michael A Mares have had extensive careers in deserts research encompassing all of the world's arid and semiarid regions The Encyclopedia opens with a subject list by topic an organizational guide that helps the reader grasp interrelationships and complexities in desert systems Each entry concludes with cross references to other entries in the volume inviting the reader to embark on a personal expedition into fascinating previously unknown terrain In addition a list of important readings facilitates in depth study of each topic An exhaustive index permits quick access to places topics and taxonomic listings of all plants and animals discussed More than one hundred photographs drawings and maps enhance our appreciation of the remarkable life landforms history and challenges of the world's arid land **Population Biology of** Grasses G. forest ecosystem productivity The 5th edition of Forest Ecology retains the readability and accessibility of the previous editions and includes important additional topical material that has surfaced in the field All topics are approached with a landscape ecosystem or geo ecological view which places biota organisms and communities in context as integral parts of whole ecosystems that also include air atmosphere and climate topography soil and water As such the book fills a niche utilized by no other forest ecology text on the market helping students and researchers consider whole ecosystems at multiple scales Sample topics covered in Forest Ecology include Contemporary components of forest ecology including climate change invasive species diversity ecological forestry landscape ecology and ecosystem services Characteristics of physiography important for forest ecosystems including its effects on microclimate disturbance soil and vegetation Genetic diversity of woody plants and genecological differentiation of tree species including the importance of hybridization polyploidy and epigenetics Site quality estimation using tree height and ground flora and multiple factor approaches to forest site and ecosystem classification and mapping Forest Ecology is a highly accessible text for students but it also serves as an excellent reference for academics In addition practitioners of forest ecology can also harness the information within to gain better insight into the field for practical application of concepts Flora and Fauna of Alpine Australasia Bryan A. Barlow, 2023-08-14 Creatures of the Dark L. Alterman, Gerald A. Doyle, M.K. Izard, 2013-03-09 The papers in this volume are representative of those presented at a conference entitled Creatures of the Dark The Nocturnal Prosimians held at Duke University June 9 12 1993 The purpose of the conference attended by more than 100 scientists was to assemble for the ftrst time ever scholars from diverse ftelds with a common interest in the nocturnal prosimian primates The history of the precursors of this meeting are outlined in the Historical Perspective by Doyle this volume Most of the invited papers are presented here in modified form as are several papers originally presented as posters. Two papers are included that were not presented due to scheduling conftcts and health considerations Some papers delivered from the podium are not included in this volume Interactions among conference participants resulted in many revisions to the contributions as did the comments of reviewers and the editors Several papers which contained new data or new interpretations of familiar phenomena met with constructive criticism resulting in modification of the original papers We thank all of the contributors for their patience and cooperation and commend the numerous reviewers who generously donated their time and expertise We greatly appreciate funding from the National Institutes of Health the Wenner Gren Foundation for Anthropological Research the Duke University Center for International Studies the Duke University Primate Center and Drs Charles Putman of Duke University **Tropical Forest Canopies: Ecology and Management** K.E. and Malcolm Gillis currently of Rice University Linsenmair, Andrew Davis, B. Fiala, M.R. Speight, 2013-03-14 Almost half of all life on earth may exist in the world's forest canopies They may also play a vital role in maintaining the planet's climate yet they remain largely unexplored owing to difficulties of access They are renowned for their great diversity and role in forest functioning yet there are still great gaps in

the understanding of this last biological frontier This seminal book shows how canopy science is now in a position to answer many of the outstanding questions among which are some of the most pressing environmental issues society is presently facing It represents a major summary of the current understanding of canopy ecology and maps a path forward into a greater understanding of tropical forest ecology and management at a time when the very future of this ecosystem is threatened by Ecological Dimensions for Sustainable Socio Economic Development A. Yáñez-Arancibia, R. Dávalos-Sotelo, J. W. Day, 2014-05-13 This book fills a gap in the literature on environmental sustainability by addressing the topic from the perspective of social and economic development Progress in understanding and achieving sustainability requires the integration of scientific social economic and legal issues Yet progress in understanding and achieving sustainability will only be achieved through integration of scientific social economic and legal aspects A treatise on environmental sustainability should raise the current state of knowledge by proposing and recommending decision making efforts and breaking new ground with agendas aimed for the younger generation These younger scientists will be confronted with future uncertainty related to the set of crises that characterise the 21st Century e g ecological social food energy environmental climatic financial etc Currently there are a number of indicators that demonstrate that ecological conditions are being compromised globally. These include reduced primary productivity reduction in biological complexity spreading pollution such as eutrophication ecological degradation in any continental basin coastal sea ecosystem reduction in biodiversity lowered resilience and slow recovery of damaged ecosystems and reduced ecological integrity All of these problems are related to social and economic pressure. The challenge for most ecological systems is not only to establish the baseline for current ecosystem conditions but also to explore options for recovery and sustainability The latter involves ecological restoration where ecosystem and environmental services are maintained and enhanced These services are essential to social integration and economic development This book not only introduces a theoretical and conceptual framework for the topic but also analyses the uncertainty for sustainability because of dwindling natural resources It includes contributions providing a basis for public policies case studies integrating concepts and tools for solutions and a set of position papers addressing new agenda topics that will shape the 21st century The book will be useful for researchers professors and students alike as well as for all stakeholders from social economic and academic sectors **Tropical Forest** Canopies: Ecology and Management Karl-Eduard Linsenmair, 2001 **Biology and ecology of weeds** W. Holzner, M. Numata, 2013-03-14 Weeds are a fascinating study for specialists not only because of their economic importance but also since in this case biology must be combined with history and agriculture and its economic aspects Thus weed scientists may be concerned with pure basic research concentrating on general aspects or with applied science i e having a practical orientation One of the aims of this book is to create a synthesis between these two branches of study and to review the literature of both fields The agrestals the weeds of arable land the most important group from an economic point of view was

chasen as the main topic Other weed groups could only be mentioned briefly e g grassland weeds or superficially e g aquatic weeds or had to be omitted completely e.g. ruderals because they are so heterogeneous to keep this volume to an acceptable size and price Nevertheless nearly all subsections of botanical science have been treated **Seed Development and Germination** Jaime Kigel, 2017-11-01 This text is intended for plant physiologists molecular biologists biochemists biotechnologists geneticists horticulturalists agromnomists and botanists and upper level undergraduate and graduate students in these disciplines It integrates advances in the diverse and rapidly expanding field of seed science from ecological and demographic aspects of seed production dispersal and germination to the molecular biology of seed development The book offers a broad multidisciplinary approach that covers both theoretical and applied knowledge Bugs? Insects in the Web of Life Gilbert WALDBAUER, Gilbert Waldbauer, 2009-06-30 This book the first to catalogue ecologically important insects by their roles gives us an enlightening look at how insects work in ecosystems what they do how they live and how they make life as we know it possible Waldbauer combines anecdotes from entomological history with insights into the intimate workings of the natural world describing the intriguing and sometimes amazing behavior of these tiny creatures As entertaining as it is informative this charmingly illustrated volume captures the full sweep of insects integral place in the web of life Ruderal Vegetation Along Some California Roadsides Robert E. Frenkel,1977

Birds and Berries Barbara Snow, David Snow, 2010-11-30 This thought provoking text offers many insights not generally perceived by ornithologist or botanist and is illustrated in masterly fashion by John Busby's lively drawings. The book's subtitle A study of an ecological interaction properly reflects the author's theme but may tend to hide the fact that the relationships between birds and berries can be much more than the simple mutually advantageous systems eat my fruits spread my seeds they may seem at first to be Therein lies the core of the book the less obvious intricacies and implications of plant bird associations the colevolution of species in some cases and the adaptation of a species bird or plant to further its own advantage. To complicate the scene too there are the exploiters the pulp predators and seed predators that feed at the plant's expense. In Part I of the book the authors provide accounts by species of the trees and shrubs they observed over many years in their study area of southern England similarly Part 2 records the bird species they watched feeding or attempting to feed or preventing other birds from feeding on the fruits Part 3 ranges widely and is not confined to Britain and Europe. It investigates the strategies and adaptations evolved and employed by plants to ensure their success and their attempts at defence against the bird predators. It looks at the birds themselves their foraging techniques and fruit preferences the limitations of a fruit diet and adaptations to it the time and energy budgets of fruit eaters and finally the intriguing question of co evolution of plants and birds.
