## **Reformation Applied:**

**Architect of Reformation** Bruce Gordon, Emidio Campi, 2019-03-22 Heinrich Bullinger the friend and successor of Huldrych Zwingli led the Zurich church for almost fifty years after Zwingli's death and was largely responsible for the construction of the Reformed church in the sixteenth century. Nevertheless, Bullinger has often been called the forgotten Reformer of the sixteenth century. *Architect of Reformation* is the first broad introduction to Bullinger's life and theology available in English. The book features an international collection of the world's leading Bullinger and Reformation scholars addressing such categories as theology, spirituality, ecclesiology, humanism, politics, and family. At the five hundred year anniversary of Bullinger's birth, *Architect of Reformation* gives the often overlooked Swiss Reformer his long overdue and much deserved recognition as a leading figure among second generation Reformers. **Sexuality, Law and Legal Practice and the Reformation in Norway** Anne Riisøy, 2009-02-23 Based on legislation and legal practice from the period c 1250-1600, the book takes issue with the most important viewpoints in earlier research by early modernists that the Reformation represented a watershed in a development characterized by greater criminalisation of sexual acts, increase in the severity of sentences, and deterioration of the position of women. According to this study, in principle all or mostly all factors were already in place in the Middle Ages. In Norwegian historiography, the period investigated is characterized by paucity of sources, and the period has tended to fall between two stools respectively the medievalist and the early modernist. The ambition of this book has been to bridge the gap. **The Process of Admission to Ordained Ministry: The first Lutheran, Reformed, Anglican and Wesleyan rites** J. F. Puglisi, 1996 *The Process of Admission to Ordained Ministry: A Comparative Study* Volume II. **Developments in Numerical and Experimental Methods Applied to Tribology** D. Dowson, C. M. Taylor, M. Godet, 2014-05-20 *Developments in Numerical and Experimental Methods Applied to Tribology* contains the proceedings of the 10th Leeds-Lyon Symposium on Tribology held at the Institut National des Sciences Appliquées in Lyon, France, on September 6-9, 1983. The papers explore developments in numerical and experimental methods used in tribology and cover topics ranging from ferrography and rheology to bearings and bearing dynamics, hydrodynamics, contact phenomena, and plasticity. The papers are organized into 13 sessions. The first two papers examine the use of ferrography in the analysis of non-ferrous particles as well as some of the methods of obtaining approximate numerical solutions to boundary value problems that arise in elastohydrodynamic lubrication. The next session is concerned with rheology and contains papers that describe numerical solutions for power law fluids as applied to slider bearings, grease lubricated finite length bearings, and the use of the ball bearing as a rheological test device. The papers that follow discuss bearings and their dynamics, oil films on lubricated surfaces, hydrodynamic lubrication, and finite element analysis of transient elastohydrodynamic lubrication. The final session considers plastic deformation, two-body abrasion processes, and micropitting and asperity deformation. This monograph will appeal to tribologists.
