**Path To Transformational Space Exploration, The (In 2 Volumes)** Philip Lubin,2022-03-14 In this book professor Lubin lays out the fundamental physics and mathematics required to radically alter our capabilities in propulsion to enable extremely high speed space flight both in our solar system and beyond The case is made that the only currently viable solution to enable this transformation including relativistic flight for the first interstellar robotic missions is using large scale directed energy Traditional methods of propulsion are not capable of achieving the speed required for rapid missions in our solar system including fast crewed missions to Mars as well as the many robotic missions desired both in our solar system and to the nearest stars Humanity has now reached a technological tipping point with the ability to project power over vast distances with transformational implications in a wide variety of areas from propulsion to beaming power throughout our solar system to planetary defence In a series of over 50 technical papers the fundamentals of this transformation are outlined and synthesized in this book allowing a detailed understanding of the many challenges ahead and a roadmap to the future direction for human exploration far beyond our solar system While the road ahead is long and challenging it provides the path to radically altering humanity's future in ultra high speed space exploration

**Commercial Space Exploration** Jai Galliot,2016-03-09 Not since man set foot on the moon over four decades ago has there been such passion and excitement about space exploration This enthusiasm and eagerness has been spurred on by the fact that for the first time since the very beginning of the space age space travel is no

longer limited to an elite group of highly trained and well disciplined military officers and test pilots. Instead we must understand that the possibility of commercial space travel is already on our horizon and that it comes with a number of significant practical and moral challenges. Our level of scientific development and ability to influence international affairs and policy confers upon us an obligation to study the ethical, legal and social considerations associated with space exploration and understanding the potential consequences from the beginning is critical. This volume provides the first comprehensive and unifying analysis concerning the rise of private space exploration with a view toward developing policy that may influence real world decision making. The plethora of questions demanding serious attention: privatisation and commercialisation, the impact on the environment, health, futures, risk assessment, responsibility and governance are directly addressed in this scholarly work.
