Allogeneic Stem Cell Transplantation Mary J. Laughlin, Hillard M. Lazarus, 2002-11-08 Internationally recognized physicians and researchers review both the basics of allogeneic stem cell transplantation and recent advances in the field particularly as they relate to antitumor effects and graft versus host disease They also provide unique decision tree analyses to guide clinicians in selecting and managing their allogeneic transplant patients The innovations discussed cover a variety of areas ranging from stem cell mobilization in normal donors to indications for allogeneic transplantation other than hematologic malignancies to the use of nonmyeloablative conditioning regimens The authors also explore new developments in the optimal selection of unrelated allogeneic grafts e g matched unrelated donor partially mismatched family member or umbilical cord blood the use allogeneic peripheral blood stem cell vs marrow derived grafts for transplantation and the kinetics of immune reconstitution after transplantation

High-Grade Gliomas Gene H. Barnett, 2007-11-21 This is truly an exciting time in the field of neuro oncology particularly in the area of high grade gliomas The management of patients with high grade gliomas has historically been one of the most challenging and disheartening fields in medicine where failure is the rule and longevity is the exception The jaded often state that despite purported advances in surgical and radiotherapeutic techniques and a myriad of clinical trials of medical therapies the survival statistics for glioblastoma have not changed in the last three decades The nihilism associated with these tumors is such that some practitioners still advise against treatment or even biopsy recommending palliative care with the diagnosis based only on history and an MRI scan If the current state of the art in the diagnosis and management of high grade gliomas was truly so bleak there would be no reason to compile and publish a monograph on the subject The fact is that we have recently entered an era where real progress is being made in our understanding and treatment of high grade gliomas that is directly benefiting some patients We are slowly but surely chipping away at this problem One approach has exploited correlations between particular molecular markers and therapeutic response The first such breakthrough in high grade glioma was the observation that loss of chromosomes 1p and 19q uniformly predict chemosensitivity in anaplastic oligodendrogliomas 1

Treatment of Acute Leukemias Ching-Hon Pui, 2002-11-14 In Treatment of Acute Leukemias international experts not only review the state of the art in managing children and adults with acute leukemia but also debate the pros and cons of current controversial and problematic issues The book summarizes the best diagnostic and treatment practices for acute leukemias in children adolescents and adults Among the therapies discussed are methotrexate asparaginase antipurines epipodophyllotoxins hematopoietic stem cell transplantation hematopoietic growth factors and immunotherapy

Induction Chemotherapy Karl Reinhard Aigner,Frederick O. Stephens,2016-05-27 This book presents the full range of management techniques and practices used in induction chemotherapy both systemic and locoregional by experienced

international groups within one accessible volume It provides the latest information on the pioneering and cutting edge practices employed in different institutions and documents the advantages of integrated treatment schedules All those responsible for treating patients with locally advanced cancers may find new interesting aspects of locoregional cancer management and will find this book to be an invaluable source of up to date information Throughout the world induction chemotherapy is being used as part of an integrated plan of management for locally advanced solid tumors while systemic chemotherapy is most commonly used to shrink primarily non operable tumors In cases of poorly or nonresponsive tumors attempts have been made to administer chemotherapeutics via the arterial route in order to achieve higher localized drug exposure and response rates Such therapies are being practiced worldwide in independent remote departments in universities teaching hospitals and clinical schools Frequently however these teams remain relatively unaware of the work being done in other institutions which may slow further progress

Cancer Immunotherapy at the Crossroads James H. Finke, Ronald M. Bukowski, 2003-11-24 Leading investigators and clinicians detail the different mechanisms used by tumors to escape and impair the immune system and then spell out possible clinical strategies to prevent or reverse tumor induced immune dysfunction The authors review the mechanisms of immune dysfunction and evasion mechanisms in histologically diverse human tumors focusing on tumor induced molecular defects in T cells and antigen presenting cells dendritic cells and tumors that may serve as biomarkers for patient prognosis They discuss the means by which these immune functions may be protected or restored in order to more effectively support the process of tumor rejection in situ Cutting edge techniques are outlined with the capacity to monitor the strength and quality of patients immune responses using immunocytometry MHC peptide tetramers combined with apoptosis assay ELISPOT assay and detection of MHC TAA peptide complexes on tumor cells

Cancer of the Lung Alan Weitberg, 2001-10-04 Alan B Weitberg MD and a panel of internationally recognized basic scientists and clinicians present a comprehensive discussion of lung cancer including a practice oriented review of its diagnosis evaluation and treatment The contributors offer not only an understandable description of its molecular origins an essential key to developing future therapies and preventive measures but also rigorously discuss well tested approaches as well as those that are currently being evaluated for future use in both the laboratory and clinic The book also elucidates the creation and effective deployment of treatment guidelines introduced by third party payers to improve clinical outcomes even while lowering healthcare costs

Molecular Pathology of Gynecologic Cancer Antonio Giordano, Alessandro Bovicelli, Robert J. Kurman, 2007-10-05 This book focuses on putting successful molecular strategies into practice for the treatment of gynecologic cancer It approaches research into the pathology and treatment of gynecologic oncology from both clinical and experimental perspectives New insights made possible by the introduction of advanced technologies into the field are presented This new volume will be necessary reading for clinicians and experimental researchers alike

Colorectal Cancer Leonard B. Saltz, 2007-11-07 Management options for patients with colorectal cancer have undergone dramatic

changes over the past decade Whereas at the start of 1996 only one drug 5 Fluorouracil was available for the treatment of this disease a mere 10 yr later six drugs are licensed for use in colorectal cancer and others are in the late phases of clinical development Likewise surgical and ablative options as well as an array of supportive medications have shown substantial progress and undergone a dramatic proliferation over the past decade With the increased number of therapeutic options from which to choose the clinician is better able to offer effective therapy to the patient with colorectal cancer The clinician is challenged however to keep up with the rapidly changing landscape and the rapidly emerging data that shape the options for treatment today and tom row In this text leaders in the management of colorectal cancer review the current literature that has led us to where we are today Critical evaluations of the data are offered and evidence based recommendations are made
