

WHAT IS SELF EXPLORATION?

- *If there is no difference between what we are and what we want to be, then there is no problem.*
- *But if there is a difference, it implies we are living with a contradiction (of not being what we really want to be) which we need to resolve.*
- *In short, self exploration is a process of discovering the innateness and universality between all human beings.*
- *Self exploration enables us to look at the contradictions within us and resolve them by becoming aware of our natural acceptance.*

Religion And Self Acceptance An Exploration:

Explorations in Neuroscience, Psychology and Religion Kevin S. Seybold, 2016-04-15 In the 1990s great strides were taken in clarifying how the brain is involved in behaviors that in the past had seldom been studied by neuroscientists or psychologists This book explores the progress begun during that momentous decade in understanding why we behave think and feel the way we do especially in those areas that interface with religion What is happening in the brain when we have a religious experience Is the soul a product of the mind which is in turn a product of the brain If so what are the implications for the Christian belief in an afterlife If God created humans for the purpose of having a relationship with him should we expect to find that our spirituality is a biologically evolved human trait What effect might a disease such as Alzheimer's have on a person's spirituality and relationship with God Neuroscience and psychology are providing information relevant to each of these questions and many Christians are worried that their religious beliefs are being threatened by this research Kevin Seybold attempts to put their concerns to rest by presenting some of the scientific findings coming from these disciplines in a way that is understandable yet non threatening to Christian belief

Exploring Mental Health in Vulnerable Populations in Developing Countries John Elvis Hagan Jr., Frank Quansah, Jacob Owusu Sarfo, Zahir Vally, Azaz Sharif, 2025-09-16. The physical, social, and economic implications of poor mental health are extensive. The prevalence and pattern of mental health-related challenges, resources, and interventions have been well reported in developed countries. Despite the growing evidence of this health problem in developing countries, a research gap still exists on the holistic measurement and description of the problem, including interventions, policies, actions, and programs to mitigate mental health challenges. Considerable empirical evidence suggests that multifaceted social, economic, and environmental factors are drivers of mental health and its associated disorders. Considering these points, promoting mental health across vulnerable populations in low and middle income countries is critical to global health. As the world seeks to achieve Sustainable Development Goal 3 (SDG3), it is clear that mental health can significantly impact overall human health regardless of gender, age, or career stage. The importance of improving the mental health of vulnerable populations throughout an individual's lifespan and within different professional environments cannot be underestimated. By comprehending the obstacles and prospects related to mental health and its related illnesses among vulnerable populations, valuable insights could be obtained to create effective interventions and strategies that promote mental well-being globally. Specifically, taking steps to enhance the daily living conditions of this population offers opportunities to improve any population's mental health and decrease the risk of mental illnesses or disorders.
