

Introduction to Religious Studies

Introduction

Religious Studies as an academic discipline is a systematic effort by scholars and researchers to investigate religion and religious phenomena applying other methods used in the study of such disciplines as humanities and social sciences than those exclusively used in Theology (Whaling, 1984; Hood et al 1996.). For this reason, it is a “multi-disciplinary, secular study of religious beliefs, behaviors, and institutions, emphasizing systematic, historically-based, and cross-cultural description, comparison, interpretation, and explanation” (http://en.wikipedia.org/wiki/Religious_studies as retrieved on 7/3/2007).

The development of the discipline... has been necessitated by the naïve claim of religious communities to an exclusive possession of truth – a claim unhampered by any doubt as to the adequacy of its apprehension and understanding... When it prepares the ground for the raising of the problem of truth by gathering necessary data, this discipline is not only within its legitimate province but also is performing one of its essential functions (Wach, 1963:29)

Originating in late 19th century in Europe, this area of study is believed to have begun with Max Muller (Wach, 1963; Dhavanmony, M. 1973; Smart, N. 1984). In 1856, this world renowned scholar published a book entitled, *Comparative Mythology* followed by two more works entitled, *Introduction to Science of Religion*, published in 1870 and lectures on *Origin and Growth of Religion as Illustrated by the Religions of India*, published in 1878. The said works marked the first stage of this discipline.

Wach explains this stage in the following words:

This first stage of study was characterized by a genuine enthusiasm, a sincere desire to understand other religions, and a measure of speculative interest. Among the various forms of expression of religious experience, it was mythology which attracted special attention (1963:3).

In its early years, the new discipline was known as Science of Religion (*Religionswissenschaft* in Germany and *Sciences de la religion* in the French-speaking world) or the Comparative Religion/Comparative Study of Religions (Eliade, M. 1959; Kant, E. 1960; Van der Leeuw, 1963). In some parts of the world such as USA, this came to be known as History of Religions and as Religiology in some of the Asian countries. It was called Science of Religion to denote the emancipation of the new discipline from Theology (Campsty, 1991; Eliade, 1987; Smart, 1973). On the other hand, it was called Comparative Religion because of the general tendency of scholars in this field of knowledge to compare religious data from different religions. “Everyone was looking for parallels” (Wach, 1963:3).

Methods in the Study of Religion remains the only comprehensive survey in English of methods and methodology in the discipline. Designed for non-specialists and upper undergraduate/graduate level students, it discusses the range of methods currently available to stimulate interest in unfamiliar methods and enable students and scholars to evaluate methodological issues in research. The Handbook comprises 39 chapters, 21 of which are new and the rest revised for this edition. A total of 56 contributors from 10 countries cover a broad range of topics, divided into three clear parts: Methodology, Methods, and Techniques. The first section addresses general methodological issues, including comparison, research design, research ethics, intersectionality, and theorizing analysis. The second addresses specific methods, including advanced computational methods, autoethnography, computational text analysis, digital ethnography, discourse analysis, experiments, field research, grounded theory, interviewing, reading images, surveys, and videography. The final section addresses specific techniques, including coding, focus groups, photo elicitation, and survey experiments. Each chapter covers practical issues and challenges, theoretical bases, and their use in the study of religion, illustrated by case studies. The Routledge Handbook of Research Methods in the Study of Religion is essential reading for students and researchers in the study of religion, as well as for those in related disciplines.

The authors' extensive qualitative investigation involving various Catholic constituents demonstrates the complex ways attitudes are formed. Based on interviews with priests, Catholic parishioners, anti-abortion activists, and Catholics living in close proximity to activism, this book takes a lived religion approach to argue that attitudes and approaches to abortion are nuanced and contextual, with the Catholic concept of individual conscience playing a

fundamental role in navigating abortion issues Ultimately this investigation helps to explore in much greater depth the increased liberalisation in attitudes among Catholics towards abortion at a time when Catholic activism opposing abortion is growing and therefore shines a light on the conflicts that are apparent at the heart of Catholic parishes Thisbook will be of interest to scholars in Gender and Sexuality Studies Sociology Theology and Religious Studies Introduction to New and Alternative Religions in America William M.
