**Department of Agriculture Conservation Programs** ,2004 Energy Abstracts for Policy Analysis ,1989 *Commodity and Resource Policies in Agricultural Systems* Richard E. Just, Nancy Bockstael, 2012-12-06 Agricultural natural resource and environmental problems are becoming increasingly interdependent For example soil erosion is largely determined by agricultural land use Both water use and water contamination depend on land use and technology choice in agriculture In many areas the fertilizers and pesticides used in agriculture are major pollutants of ground and surface water having adverse effects on drinking water and fisheries Agricultural pollutants such as pesticides also produce adverse health effects for agricultural workers and the consuming public On the other hand the availability of water resources and the value of competing land uses influence agricultural production Additionally regional air quality problems may affect crops and global environmental trends may have long term implications for farming Agriculture natural resources and environmental quality are all heavily regulated in the U S but they are done so by a vast array of competing or unrelated agencies within the U S Departments of Agriculture Interior and Commerce the Environmental Protection Agency and numerous state agencies Considering the large number of bureaucratically remote public agencies involved and the pervasive interdependencies between agriculture natural resources and the environment policies develop which are at best uncoordinated and at worst conflicting and counterproductive These policies have become sources of controversy as different interest groups struggle to affect their implementation as different agencies have fought for administrative control and as legislative bodies have attempted to enact piecemeal changes Agricultural Resources and Environmental Indicators, Agriculture Handbook No. 712, 1996-97 ,1997

*The Vanishing Farmland Crisis* John Baden, 2021-10-08 Newspapers seem to be telling us that every cornfield is threatened by a Dairy Queen This media barrage about the crisis of our shrinking farmland can be traced to the 1979

publication of *Where Have All the Farmlands Gone* by the National Agricultural Lands Study. The NALS report, to which eleven federal agencies contributed, argued that land use planning and control must be employed to protect valuable farmland from urban sprawl. This volume, a collection of essays by a distinguished group of economists including Theodore W. Schultz, Julian L. Simon, and Pierre Crosson, takes issue with the belief that croplands need governmental protection. In opposition, the collection as a whole supports two theses: 1. shrinking farm acreage is not a serious problem, and 2. individual choices by landowners in a market setting result in better organized land use than would governmental land use planning and regulation. Published for the Political Economy Research Center, Bozeman, Montana.
