BRITISH ASSOCIATION OF PHARMACEUTICAL PHYSICIANS **The Law and Ethics of the Pharmaceutical Industry**
M.N.G. Dukes, 2005-11-04 As one of the most massive and successful business sectors the pharmaceutical industry is a potent force for good in the community yet its behaviour is frequently questioned could it serve society at large better than it has

done in the recent past Its own internal ethics both in business and science may need a careful reappraisal as may the extent to which the law administrative civil and criminal succeeds in guiding and where necessary constraining it The rules of behavior that may be considered to apply to today s pharmaceutical industry have emerged over a very long period and the process goes on Even the immensely detailed standards for quality safety and efficacy laid down in drug law and regulation during the second half of the twentieth century have their limitations as tools for ensuring that the public interest is well served In particular national and regional regulatory agencies are heavily dependent on industrial data for their decision making their standards and competence vary and even the existing network of agencies does not cover the entire world What is more there are many areas of law and regulation affecting the industry concerning for example the pricing of medicines the conduct of clinical studies the health protection of workers and concern for the environment In some fields it is indeed hardly possible to maintain standards through regulation Professor N M Graham Dukes a physician and lawyer with long term experience in industrial research management academic study and international drug policy provides here a powerfully documented analysis into the way this industry thinks acts and is viewed and examines the current trends pointing to change Provides a balanced picture of the current role of the pharmaceutical industry in society Includes indices of conventions laws and regulations as well as judicial and disciplinary cases This is the only book addressing the legal implications of big pharma activities and ethical standards

Cumulated Index Medicus, 1989 *Legal Issues in Mental Health Care* B.A. Weiner, R. Wettstein, 2013-06-29 I

OVERVIEW *Legal Issues in Mental Health Care* is aimed at the mental health clinician who provides services on either an inpatient or an outpatient basis It is written for psychiatrists psychologists social workers nurses and other therapists to help them understand and manage legal issues in their daily practice The issues covered apply to therapists who work for an agency or hospital as well as those who work independently The book is meant to serve as a handbook but it also provides a quick resource as legal questions arise which are related to the obligations of the therapist It addresses the legal issues that confront the clinician It is not aimed at the clinician who specializes in forensic mental health issues because the information

provided does not reach that level of detail or sophistication Nor is it aimed at the scholar because our goal is to provide practical information in a clear and concise format We have not addressed the wide array of laws protecting the mentally disabled from discrimination most notably the Americans with Disabilities Act 1990 and the Fair Housing Act Most states also have laws that prohibit discrimination in employment services and housing These issues are beyond the scope of this book because we are addressing the legal issues that arise in providing care rather than the rights of mentally disabled persons

Medicinal Product Liability and Regulation Richard Goldberg, 2014-07-18 The piecemeal developments in product liability reform in Europe have their origins in the tragic association of phocomelia in children with thalidomide in 1962 In many ways these events have continued to generate pressure for reform of product liability especially for the victims of drug induced injury This monograph attempts to address the major problems that typify claims for drug induced injury as well as highlighting the complex interrelationship between liability exposure and drug regulation While medicinal products are subject to strict liability under the product liability directive the claimant may have considerable difficulty in establishing that the relevant product is defective and that it caused the damage It may also be necessary to overcome the development risk defence where this is pleaded The monograph addresses these problems on a comparative jurisprudential basis and seeks to determine whether medicinal products should be treated as a special case in the field of product liability It examines the role of epidemiological evidence in assessing causation in product liability cases concerning medicinal products in the light of recent developments in the UK Supreme Court the United States Canada and France In particular it addresses the difficulties in reconciling the standards of proof in law and science including the theory that causation can be proved on the balance of probabilities by reference to the doubling of risk of injury An important case study compares and contrasts the approaches of the UK and the US to the measles mumps rubella Litigation The book also examines the question as to whether compliance with regulatory standards should protect pharmaceutical manufacturers from product liability suits It seeks to support a via

media whereby the victims of drug induced injury can receive justice while at the same time encouraging drug safety and innovation in drug development
