Bar-Hen, 2013-06-26 This volume includes contributions selected after a double blind review process and presented as a preliminary version at the 45th Meeting of the Italian Statistical Society The papers provide significant and innovative original contributions and cover a broad range of topics including statistical theory methods for time series and spatial data statistical modeling and data analysis survey methodology and official statistics analysis of social demographic and health data and economic statistics and econometrics *Complex Survey Data Analysis with SAS* Taylor H. Lewis, 2016-09-15
Complex Survey Data Analysis with SAS is an invaluable resource for applied researchers analyzing data generated from a sample design involving any combination of stratification clustering unequal weights or finite population correction factors After clearly explaining how the presence of these features can invalidate the assumptions underlying most traditional statistical techniques this book equips readers with the knowledge to confidently account for them during the estimation and inference process by employing the SURVEY family of SAS STAT procedures The book offers comprehensive coverage of the most essential topics including Drawing random samples Descriptive statistics for continuous and categorical variables Fitting and interpreting linear and logistic regression models Survival analysis Domain estimation Replication variance estimation methods Weight adjustment and imputation methods for handling missing data The easy to follow examples are drawn from real world survey data sets spanning multiple disciplines all of which can be downloaded for free along with syntax files from the author's website <http://mason.gmu.edu/~tlewis18> While other books may touch on some of the same issues and nuances of complex survey data analysis none features SAS exclusively and as exhaustively Another unique aspect of this book is its abundance of handy workarounds for certain techniques not yet supported as of SAS Version 9.4 such as the ratio estimator for a total and the bootstrap for variance estimation Taylor H. Lewis is a PhD graduate of the Joint Program in Survey Methodology at the University of Maryland College Park and an adjunct professor in the George Mason University Department of Statistics An avid SAS user for 15 years he is a SAS Certified Advanced programmer and a nationally recognized SAS educator who has produced dozens of papers and workshops illustrating how to efficiently and effectively conduct statistical analyses using SAS
