Information Technology Security Fundamentals Glen Sagers, Bryan Hosack, 2015-10-22 Information security is at the forefront of timely IT topics due to the spectacular and well publicized breaches of personal information stored by companies To create a secure IT environment many steps must be taken but not all steps are created equal There are technological measures that increase security and some that do not do but overall the best defense is to create a culture of security in the organization The same principles that guide IT security in the enterprise guide smaller organizations and individuals The individual techniques and tools may vary by size but everyone with a computer needs to turn on a firewall and have antivirus software Personal information should be safeguarded by individuals and by the firms entrusted with it As organizations and people develop security plans and put the technical pieces in place a system can emerge that is greater than the sum of its parts

Content Distribution for Mobile Internet: A Cloud-based Approach Zhenhua Li, Yafei Dai, Guihai Chen, Yunhao Liu, 2023-02-14 Content distribution i.e. distributing digital content from one node to another node or multiple nodes is the most fundamental function of the Internet

Since Amazon's launch of EC2 in 2006 and Apple's release of the iPhone in 2007 Internet content distribution has shown a strong trend toward polarization. On the one hand considerable investments have been made in creating heavyweight integrated data centers heavy cloud all over the world in order to achieve economies of scale and high flexibility efficiency of content distribution. On the other hand end user devices light end have become increasingly lightweight mobile and heterogeneous creating new demands concerning traffic usage energy consumption bandwidth latency reliability and or the security of content distribution. Based on comprehensive real world measurements at scale we observe that existing content distribution techniques often perform poorly under the abovementioned new circumstances. Motivated by the trend of heavy cloud vs light end this book is dedicated to uncovering the root causes of today's mobile networking problems and designing innovative cloud based solutions to practically address such problems. Our work has produced not only academic papers published in prestigious conference proceedings like SIGCOMM NSDI MobiCom and MobiSys but also concrete effects on industrial systems such as Xiaomi Mobile MIUI OS Tencent App Store Baidu PhoneGuard and WiFi com. A series of practical takeaways and easy to follow testimonials are provided to researchers and practitioners working in mobile networking and cloud computing. In addition we have released as much code and data used in our research as possible to benefit the community.
