Sedimentary Processes Quantification Using Radionuclides:

Sedimentary Processes: Quantification Using Radionuclides J. Carroll,I. Lerche,2003-09-19 The advent of radionuclide methods in geochronology has revolutionized our understanding of modern sedimentary processes in aquatic systems This book examines the principles of the method and its use as a quantitative tool in marine geology with emphasis on the Pb 210 method The assumptions and consequences of models and their behaviour are described providing the necessary background to assess the advantages and trade offs involved when choosing a particular model for application One of the purposes of this volume is to disentangle the influences of complicating factors such as sediment flux variations post depositional diffusion of radionuclides and bio irrigation of sediments to arrive at sediment ages and to properly assess the attendant data uncertainty Environmental impacts of chemical nuclear or other waste material are of concern in a variety of areas around the world today A number of relevant examples are included demonstrating how dating models are useful for determining sources of contaminants and interpreting their influence on the environment The book is set at a level so that an able student or professional should have no difficulty in following the procedures and methods developed Each chapter includes case histories showing the strengths and weaknesses of a given procedure with respect to a data example Included with this volume is the computer source code of a new generation of modelling tools based on inverse numerical analysis techniques This first generation of the modelling tool is included along with detailed instructions and examples for its use in an appendix

Radiological Risk Assessment and

Environmental Analysis John E. Till, Helen A. Grogan, 2008-07-10 Radiological Risk Assessment and Environmental Analysis comprehensively explains methods used for estimating risk to people exposed to radioactive materials released to the environment by nuclear facilities or in an emergency such as a nuclear terrorist event. This is the first book that merges the diverse disciplines necessary for estimating where radioactive materials go in the environment and the risk they present to people. It is not only essential to managers and scientists but is also a teaching text. The chapters are arranged to guide the reader through the risk assessment process beginning with the source term where the radioactive material comes from and ending with the conversion to risk. In addition to presenting mathematical models used in risk assessment data is included so the reader can perform the calculations. Each chapter also provides examples and working problems. The book will be a critical component of the rebirth of nuclear energy now taking place as well as an essential resource to prepare for and respond to a nuclear emergency. L'Annunziata, 2012-08-16 Authoritative reference providing the principles, practical techniques and procedures for the accurate measurement of radioactivity.

Marine Radioactivity, 2004-09-17 This book on Marine Radioactivity sets out to cover most of the aspects of marine radioactivity which have been the focus of scientific study in recent decades. The authors and their reviews divide into topic areas which have defined the field over its history. They cover the suite of natural radioisotopes which have been present in the oceans since their formation and quantitatively dominate the inventory of radioactivity in the oceans. Also addressed are the suite of artificial radionuclides introduced to the oceans as a consequence of the use of the atom for development of nuclear energy, nuclear weapons and various applications of nuclear science. The major source of these continues to derive from the global fallout of atmospheric tests of nuclear weapons in the 1950s and 1960s but also includes both planned and accidental releases of radioactivity from both civilian and military nuclear technology. The other division of the major study direction depends on whether the objective is to use the radionuclides as powerful tools to study oceanic processes to describe and understand the ocean distribution of the various natural or artificial radionuclides or to assess the different radionuclides impact on and pathways to man or marine organisms. The oceans cover 70% of the Earth's surface and thus contains a corresponding large share of the Earth's radioactivity. Marine Radioactivity covers topics of recent scientific study in this young field. It examines both natural radioactivity, radioactivity naturally present in oceans since their formation and artificial radioactivity, radioactivity introduced by man and use of atomic and nuclear energy with regard to possible effects on the global environment. Twining,2012-12-31 Tropical Radioecology is a guide to the wide range of scientific practices and principles of this multidisciplinary field It brings together past and present studies in the tropical and sub tropical areas of the planet highlighting the unique aspects of tropical systems Until recently radioecological models for tropical environments have depended upon data derived from temperate environments despite the differences of these regions in terms of biota and abiotic conditions Since radioactivity

can be used to trace environmental processes in humans and other biota this book offers examples of studies in which radiotracers have been used to assess biokinetics in tropical biota Features chapters co authored by world experts that explain the origins inputs distribution behaviour and consequences of radioactivity in tropical and subtropical systems Provides comprehensive lists of relevant data and identifies current knowledge gaps to allow for targeted radioecological research in the future Integrates radioecological information into the most recent radiological consequences modelling and best practice probabilistic ecological risk analysis methodology given the need to understand the implications of enhanced socio economic development in the world s tropical regions Sediments in the Tema Harbour (Ghana) Benjamin O. Botwe,2018-07-11 Sediment pollution and accumulation in harbours are major environmental issues and studies that advance their solutions are essential for harbour sustainability This book provides the first comprehensive assessment of chemical pollution in sediments and sediment accumulation rates in the tropical Tema Harbour Ghana This book contributes to improving our ability to use an integrated approach involving sediment chemistry and bioassays in one comprehensive assessment of the contamination state of a tropical coastal environment Whole sediment toxicity bioassays using the amphipod Corophium volutator and the polychaete Hediste diversicolor as bioindicators were combined with data on concentrations of total metal and metal binding forms radionuclides organochlorine pesticides and polycyclic aromatic hydrocarbons in bottom sediments as well as total metal concentrations in settling silt clay particles collected by sediment traps to characterise the hazard risk and impact of sediments from the tropical coastal Tema Harbour Freshwater and Estuarine Radioecology G. Desmet,1997 Hardbound The Chernobyl accident drew attention to the difficulties of understanding the dynamics of radionuclide transport through the environment using older methods developed after the pseudo steady state pollution resulting after the weapons testing fallout More recent approaches which are reported in this book have incorporated both the dynamic aspects highlighted by the pulse Chernobyl input and the importance of improvement in models that can be brought about by constraining parameters on the basis of a knowledge of the fundamental physics chemistry biology and ecology of the ecosystems involved The papers within this volume include hydrodynamic models of suspended solids transport ion exchange interpretation of radionuclide sorption approaches applying a knowledge of membrane transport kinetics to the uptake of radionuclides by biota the effects of different ecological niches on the relative uptake of radionuclides by different species
