Altieri, 2004 As debate rages over the costs and benefits of genetically engineered crops noted agroecologist Miguel Altieri lucidly examines some of the issue s most basic and pressing questions Are transgenic crops similar to conventionally bred crops Are transgenic crops safe to eat Does biotechnology increase yields Does it reduce pesticide use What are the costs to American farmers Will biotechnology benefit poor farmers Can biotechnology coexist with other forms of agriculture What are the known and potential environmental and biological risks What alternatives do we have to genetically modified crops *Science and Politics* Brent S. Steel, 2014-04-21 Recent partisan squabbles over science in the news are indicative of a larger tendency for scientific research and practice to get entangled in major ideological divisions in the public arena This politicization of science is deepened by the key role government funding plays in scientific research and development the market leading position of U S based science and technology firms and controversial U S exports such as genetically modified foods or hormone injected livestock This groundbreaking one volume A to Z reference features 120 150 entries that explore the nexus of politics and science both in the United States and in U S interactions with other nations The essays each by experts in their fields examine Health environmental and social cultural issues relating to science and politics Concerns relating to government regulation and its impact on the practice of science Key historical and contemporary events that have shaped our contemporary view of how science and politics intersect *Science and Politics An A to Z Guide to Issues and Controversies* is a must have resource for researchers and students who seek to deepen their understanding of the connection between science and politics *Trading in Genes* Ricardo Melendez-Ortiz, Vicente Sanchez, 2013-06-17 Sustaining the new bioeconomy requires a global biotechnology governance regime to bring a large number of developing countries into the global trading system Failure to do so will create a genetic divide among countries and is likely to intensify public opposition to biotechnology This interdisciplinary collection of perspectives from the developing world on debates over the relationships between biotechnology biosafety sustainable development and trade

Bonwoo Koo, Philip G. Pardey, Brian Wright, 2003-12-01 The conservation of genetic resources is vital to the maintenance of biodiversity and to the world's ability to feed its growing population There are now more than a thousand genebanks worldwide involved in the ex situ meaning away from the source storage of particular classes of crops Since the 1970s the eleven genebanks maintained by the centres of the Consultative Group on International Agricultural Research CGIAR have become pivotal to the global conservation effort However key policy and management issues usually with economic dimensions have largely been overlooked This provided the impetus for a series of detailed economic studies led by IFPRI in collaboration with five CGIAR centres CIAT based in Colombia CIMMYT Mexico ICARDA Syria ICRISAT India and IRRI Philippines This book reports these studies and discusses their wider implications *Environmental Decision-Making in Context* Chad J. McGuire, 2017-09-25 Because of the complexity involved in understanding the environment the choices made about environmental issues are often incomplete In a perfect world those who make environmental decisions would be armed with a foundation about the broad range of issues at stake when making such decisions Offering a simple but comprehensive

understanding of the critical roles science economics and values play in making informed environmental decisions Environmental Decision Making in Context A Toolbox provides that foundation The author highlights a primary set of intellectual tools from different disciplines and places them into an environmental context through the use of case study examples The case studies are designed to stimulate the analytical reasoning required to employ environmental decision making and ultimately help in establishing a framework for pursuing and solving environmental questions issues and problems They create a framework individuals from various backgrounds can use to both identify and analyze environmental issues in the context of everyday environmental problems The book strikes a balance between being a tightly bound academic text and a loosely defined set of principles It takes you beyond the traditional pillars of academic discipline to supply an understanding of the fundamental aspects of what is actually involved in making environmental decisions and building a set of skills for making those decisions

Bioscience Entrepreneurship In Asia: Creating Value With Biology Paul S Teng,2008-07-29 When matched with Asian mega trends in culture demographics and economics BioScience products provide huge potential for exploitation and value creation in the coming years This potential will be further enhanced by the declining capacity of the world s oil reserves to provide hydrocarbons for fuel and materials and plants will become more important as bio factories for basic ingredients to sustain human societies Successful business models have been developed to harness the potential of BioScience to meet the demands for food feed and organochemicals based on value creation and value capture mechanisms These mechanisms are described in the book with real world case studies As BioScience applications become more basic in nature product development has increased in its complexity and requires special attention to obtain freedom to operate Controversy about novel gene technologies threatens to derail the BioScience Revolution as public concern about safety issues and bioethics are fuelled by opposition groups to the new biology This book describes communication techniques and messages to address such concerns and shows how early education programs can have high payoffs for companies that invest in novel products

Growing Plantation Forests P. W. West,2013-10-21 This book describes the scientific principles that are used throughout the world to ensure the rapid healthy growth of forest plantations As the population of the world increases so does the amount of wood people use Large areas of natural forests are being cleared every year and converted to other uses Almost as large an area of plantation forests is being established annually to replace those lost natural forests Eventually plantations will produce a large proportion of the wood used around the world for firewood building the manufacture of paper and bioenergy Forest plantations can also provide various environmental benefits

including carbon storage rehabilitation of degraded land serving as disposal sites for various forms of industrial or agricultural waste and enhancing biodiversity in regions that have been largely cleared for agriculture Whatever their motivation plantation forest growers want their plantations to be healthy and grow rapidly to achieve their purpose as soon as possible This book discusses how this is done It is written for a worldwide audience from forestry professionals and scientists through to small plantation growers and describes how plantations may be grown responsibly and profitably
