**Physics and Materials Science of High Temperature Superconductors, IV** R. Kossowsky,Miroslav Jelinek,Josef Novák,2012-12-06 Five questions dominated the ARW on Physics and Materials Science of High Temperature Superconductors of which this book forms the permanent record Briefly these are i How close are we to a unified theory The consensus is that we are not ii Flux pinning can it be achieved in bulk materials Still an open question The following three questions are related iii Can grain boundary contributions be brought under control iv What is the real requirement for purity and general chemistry control v What is the practical outlook for bulk products tapes and wires One of the conclusions is that the geometry and dimensions in thin films are the key parameters that facilitate the realization of high current densities and consequently their commercial application On the other hand the very large number of poorly understood microstructural chemical and mechanical variables involved in the preparation of bulk materials are currently prohibiting large scale commercialization of wires and tapes *From Analytic to Numerical Electromagnetics: Contributions by C.
