Low Frequency Vibrations Of Inorganic And Coordination Compounds:

Low-Frequency Vibrations of Inorganic and Coordination Compounds John R. Ferraro, 2012-12-06 During the course of far infrared investigations of inorganic and coordination compounds at Argonne National Laboratory in the years 1962-1966 it became apparent that no suitable book existed which correlated and discussed the important vibrations occurring in this region for these molecules. Early in 1967 the initial steps were taken to write such a book. Then in 1968 an excellent text by Professor David M. Adams entitled *Metal Ligand and Related Vibrations* was published. At this point serious consideration was given to discontinuing work on this book. However, upon examination of Adams' book it became clear that the references covered only the period to 1966. This field of research is accelerating so tremendously and the period 1966-1969 has seen so many new studies that upon reconsideration it was decided to continue writing this text. The references in this book, particularly in the last several chapters, include many papers published in 1969. However, the proliferation of the far infrared literature has made it impossible to present all the published material that has any bearing on the subject. Many titles do not pertain primarily to the far infrared region as such and some of this research has been omitted for this reason. Organometallic compounds have been neglected since the author feels that adequate reviews of that subject are available. Other studies may be missing simply because, owing to space limitations, only the more important researches could be considered. Of course, importance may in this case reflect the author's interest and prejudices.

Far-Infrared Properties of Solids S. Mitra, 2012-12-06 This book provides an account of modern aspects relating far infrared radiation to properties of solids it encompasses both theoretical and experimental considerations Written at the graduate level it attempts a threefold purpose an indication of the breadth of the subject an in depth examination of important areas and reference material to complement a text for a course The treatment and organization of material here is compatible with a preceding volume of this series on Optical Properties of Solids Chapters 1-6 present material concerned principally with experimental considerations necessary to the carrying out of measurements in the far infrared spectral region They also serve to provide considerable introductory material for the remaining chapters which deal with various areas that offer theoretical treatments utilizing and understanding far infrared properties of solids Several lectures presented at the Institute could not be included in this book for two reasons i Final versions of the lecture notes suitable for publication never arrived from several lecturers ii Some materials were deliberately left out from this book as they were also presented at an earlier NATO Institute and form part of a preceding volume edited by us in this series In particular it is recommended that Chapters 14 and 15 viz infrared and Raman spectra due to lattice vibrations by S S Mitra and impurity induced lattice absorption by L Genzel in Optical Properties of Solids be read concurrently with the present volume
