Makhteshim Country A Laboratory Of Natur:

The Makhteshim Country Boris R. Krasnov, 2001 **Rocks of Ages: Developing Rock Art Tourism in Israel** Joshua Schmidt, 2022-02-17 Developing Rock Art Tourism in the Negev desert of southern Israel presents the findings of an interdisciplinary project aimed at safeguarding the future of cultural heritage in the Negev Desert region of Israel which is under threat from environmental change militarisation settlement and tourism *Quaternary of the Levant* Yehouda Enzel, Ofer Bar-Yosef, 2017-04-27 Quaternary of the Levant presents up to date research achievements from a region that displays unique interactions between the climate the environment and human evolution Focusing on southeast Turkey Lebanon Syria Jordan and Israel it brings together over eighty contributions from leading researchers to review 2 5 million years of environmental change and human cultural evolution Information from prehistoric sites and palaeoanthropological studies contributing to our understanding of out of Africa migrations Neanderthals cultures of modern humans and the origins of agriculture are assessed within the context of glacial interglacial cycles marine isotope cycles plate tectonics geochronology geomorphology palaeoecology and genetics Complemented by overview summaries that draw together the findings of each chapter the resulting coverage is wide ranging and cohesive The cross disciplinary nature of the volume makes it an invaluable resource for academics and advanced students of Quaternary science and human prehistory as well as being an important reference for archaeologists working in the region **The Biology of Deserts** David Ward, 2016-06-16 This book offers a concise but comprehensive introduction to desert ecology and adopts a strong evolutionary focus As with other titles in the Biology of Habitats Series the emphasis in the book is on the organisms that dominate this harsh environment although theoretical and experimental aspects are also discussed In this updated second edition there is a greater focus on the effects of climate change and some of its likely effects on deserts seeing desertification as among the most serious results of climate change leading ultimately to the increasing size of arid and semi arid regions The Biology of Deserts Second Edition includes a wide range of ecological and evolutionary issues including morphological and physiological adaptations of desert plants and animals species interactions the importance of predation and parasitism food webs biodiversity and conservation It features a balance of plant and animal both invertebrate and vertebrate examples and also emphasizes topical applied issues such as desertification and invasive species The book concludes by considering the positive aspects of desert conservation This accessible textbook is intended for senior undergraduate and graduate students as well as professional ecologists conservation practitioners and resource managers working in the field of desert ecology

Byzantine Settlements of the Negev Desert Maciej Wacławik, 2023-06-16 This book presents a complementary synthesis of the newest research on the Negev Desert Israel in the Byzantine period 363 640 AD including a holistic analysis of archaeological reports historical sources and field surveys with the use of unmanned aerial vehicles UAVs The contextualization of settlement trends in the region reveals the subjectivity of some of earlier theories which means that the

study uses models developed as part of the French *cole des Annales* discussion on the concept of long duration Looking at the evolution of settlement from a regional and transregional perspective through the prism of the cycle of behavioural domains revealed a positive aspect of the transformation of society and settlement space that the individual and community are able to resist and get out of difficult circumstances The study also uses the paradigm of the rise and fall of cultures in light of this the long term changes taking place in late antiquity appear to consist of relatively long periods of settlement expansion and short sudden breakdowns *Large Herbivore Ecology, Ecosystem Dynamics and Conservation* Kjell Danell, Roger Bergström, Patrick Duncan, John Pastor, 2006-05-25 Most large herbivores require some type of management within their habitats Some populations of large herbivores are at the brink of extinction some are under discussion for reintroduction whilst others already occur in dense populations causing conflicts with other land use Large herbivores are the major drivers for forming the shape and function of terrestrial ecosystems This 2006 book addresses the scientifically based action plans to manage both the large herbivore populations and their habitats worldwide It covers the processes by which large herbivores not only affect their environment e g grazing but are affected by it e g nutrient cycling and the management strategies required Also discussed are new modeling techniques which help assess integration processes in a landscape context as well as assessing the consequences of new developments in the processes of conservation This book will be essential reading for all involved in the management of both large herbivores and natural resources **FOSSIL RECORD 8** Spencer G. Lucas, Robert B. Blodgett, Asher J. Lichtig, Adrian P. Hunt, 2022-08-02 Current Research Makhon ha-ge'ologi (Israel), 2002 **Equids--zebras, Asses, and Horses** Patricia Des Roses Moehlman, IUCN/SSC Equid Specialist Group, 2002 The new Equid Action Plan provides current knowledge on the biology ecology and conservation status of wild zebras asses and horses It specifies what information is lacking and prioritizes needed conservation actions The Action Plan also provides chapters on equid taxonomy genetics reproductive biology and population dynamics These chapters highlight unsolved issues of taxonomy and genetics They also provide information and insight into the special demographic and genetic challenges of managing small populations The chapter on disease provides a review of documented equine disease and epidemiology and focuses on priorities for equid conservation health The final chapter deals with the importance of developing an assessment methodology that explicitly considers the role of equids in ecosystems and the ecological processes that are necessary for ecosystem viability The approach of combining ecological field studies and ecosystem modeling should prove useful for the scientific management and conservation of wild equids worldwide These chapters provide research and conservation practitioners with new information and paradigms Turkish Journal of Earth Sciences , 2003
