Making Of Environmental Law:

The Making of Environmental Law Richard J. Lazarus, 2008-09-15 The unprecedented expansion in environmental regulation over the past thirty years at all levels of government signifies a transformation of our nation's laws that is both palpable and encouraging. Environmental laws now affect almost everything we do from the cars we drive and the places we live to the air we breathe and the water we drink. But while enormous strides have been made since the 1970s, gaps in the coverage, implementation and enforcement of the existing laws still leave much work to be done. In *The Making of Environmental Law* Richard J. Lazarus offers a new interpretation of the past three decades of this area of the law, examining the legal, political, cultural and scientific factors that have shaped and sometimes hindered the creation of pollution controls and natural resource management laws. He argues that in the future environmental law must forge a more nuanced understanding of the uncertainties and trade offs as well as the better organized political opposition that currently dominates the federal government. Lazarus is especially well equipped to tell this story given his active involvement in many of the most significant moments in the history of environmental law as a litigator for the Justice Department's Environment and Natural Resources Division, an assistant to the Solicitor General and a member of advisory boards of the U.S. Environmental Protection Agency, the World Wildlife Fund and the Environmental Defense Fund. Ranging widely in his analysis, Lazarus not only explains why modern environmental law emerged when it did and how it has evolved, but also points to the ambiguities in our current situation. As the field of environmental law grays with middle age, Lazarus's discussions of its history, the lessons learned from past legal reforms and the challenges facing future lawmakers are both timely and invigorating.

The Making of Environmental Law Richard James Lazarus, 2004 The unprecedented expansion in environmental regulation since 1970 at all levels of the government signifies an extraordinary transformation of our nation's law. How environmental law emerged, why it has since evolved in the way that it has, and what are the challenges presented as environmental law moves now into its middle age is a fascinating and revealing story which *The Making of Environmental Law* seeks to tell. The story shows how fashioning pollution control laws presents special challenges both because of the nature of pollution itself and the known means of pollution control and because of our nation's varied processes for lawmaking and the ways those processes relate to important cultural norms. Many of these challenges relate to the varied, complex and uncertain spatial and temporal dimensions of pollution itself, factors which resist simple redress. The purpose of *The Making of Environmental Law* is to describe these challenges, relate them to actual events which occurred during the past three decades and discuss what lessons can be gleaned from those decades to meet those same challenges today and in the future. The book is accordingly divided into three parts. Part I, consisting of three chapters, provides a theoretical overview of the challenges presented by environmental protection for lawmaking. The first two chapters describe the relevant physical features of the natural environment and its transformation by humankind with emphasis on their spatial and temporal dimensions that especially

challenge the fashioning of legal rules The third chapter analyzes in more detail how these features relate to the structure of U S lawmaking institutions in federal state and tribal sovereign authorities and within all three branches of government Part II is more explanatory in nature It relates the more theoretical analytic framework regarding the nature of environmental lawmaking Developed in Part I to the actual events surrounding modern environmental law s evolution during the 1960s 1970 1980s and 1990s Finally Part III is more critical and speculative in character than either Part I or II The first chapter of Part III considers the current state of environmental law including both how environmental protection law has evolved during the past three decades and how those evolutionary trends reflect the features of the ecological problems environmental law seeks to address The second chapter in Part III considers the ways in which environmental law is likely to continue to be challenged in the future especially by ever changing conceptions of time and space The third and final chapter of Part III considers the potential historical significance of current times given the unprecedented ascendancy to dominant positions in both the federal legislative and executive branches of government officials who favor major reforms of existing environmental laws

Making Environmental Law Nancy E. Marion,2011-08-10 From Eisenhower to Obama this book provides a comprehensive analysis of the policies Congress and the president have proposed and passed to protect the environment over time The U S federal government first began to consider legislation to protect the environment and natural resources in 1940s Since that time Congress and the president have considered and passed numerous environmental policies laws that serve to protect the quality of the air we breathe the water we drink the natural beauty of the land and the animals that live both on land and in the water In *Making Environmental Law The Politics of Protecting the Earth* experienced and accomplished environmental law researcher Nancy E Marion shows what policies Congress have proposed and passed to protect the environment over time Each chapter focuses on the members of Congress s response to a different environmental concern such as ocean dumping pesticides and solid waste With green awareness

Improving Compliance with International Environmental Law Jacob Werksman, James Cameron, Peter Roderick, 2014-01-14 Measures for regulating the behaviour of nation states in relation to the global environment have increasingly taken the form of international treaties and conventions Many have argued that this has proved to be an ineffective way of halting unsustainable development for the provisions of these agreements are either too weak or are flouted regularly by the parties concerned This volume seeks to address the crucial question of how compliance with these agreements could be encouraged effectively without damaging the fragile political consensus that is emerging on environmental issues With extensive use of case studies Improving Compliance will make stimulating reading for all students and researchers working in this area as well as for anyone concerned about the effectiveness of international environmental measures

Making Environmental Laws Work William Wilson, 1999

Science-Based Lawmaking Dionysia-Theodora Avgerinopoulou, 2019-08-31 The Book takes the approach of a critique of the prevailing international environmental law making processes and their systemic shortcomings It aims to partly redesign the current international environmental law making system in order to promote further legislation and more effectively protect the natural environment and public health Through case studies and doctrinal analyses an array of initial questions guides the reader through a variety of factors influencing the development of International Environmental Law After a historical analysis commencing from the Platonic philosophy up to present the Book holds that some of the most decisive factors that could create an optimized law making framework include among others progressive voting processes science based secondary international environmental legislation new procedural rules that enhance the participation in the law making process by both experts and the public and also review the implementation compliance and validity of the science base of the laws The international community should develop new law making procedures that include expert opinion Current scientific uncertainties can be resolved either by policy choices or by referring to the so called sound science In formulating a new framework for environmental lawmaking processes it is essential to re shape the rules of procedure so that experts have greater participation in those in order to improve the quality of International Environmental Law faster than the traditional processes that mainly embrace political priorities generated by the States Science serves as one of the main tools that will create the next generation of International Environmental Law

and help the world transition to a smart inclusive sustainable future
