New Directions And Applications In Control Theory Lecture Notes In Control And Information Sciences:

New Directions and Applications in Control Theory Wijesuriya P. Dayawansa, Anders Lindquist, Yishao Zhou, 2005-08-31 This volume contains a collection of papers in control theory and applications presented at a conference in honor of Clyde Martin on the occasion of his 60th birthday held in Lubbock Texas November 14 15 2003 **Lectures on Systems, Control, and Information** Lei Guo, 2000 This volume presents lectures delivered at a workshop held at the Chinese Academy of Sciences Beijing The following articles are included Nonlinear Systems Control by R Brockett Adaptive Control of Discrete Time Nonlinear Systems with Structural Uncertainties by L L Xie and L Guo Networks and Learning by P R Kumar Mathematical Aspects of the Power Control Problem in Mobile Communication Systems by C W Sung and W S Wong and Brockett's Problem on Nonlinear Filtering Theory by S S T Yau Basic concepts and current research are both presented in this book The volume offers a comprehensive and easy to follow account of many fundamental issues in this diverse field It would be a suitable text for a graduate course on wireless communication Titles in this series are co published with International Press Cambridge MA Matrix Computations and Semiseparable Matrices Raf Vandebril, Marc Van Barel, Nicola Mastronardi, 2008-12-15 The general properties and mathematical structures of semiseparable matrices were presented in volume 1 of Matrix Computations and Semiseparable Matrices In volume 2 Raf Vandebril Marc Van Barel and Nicola Mastronardi discuss the theory of structured eigenvalue and singular value computations for semiseparable matrices These matrices have hidden properties that allow the development of efficient methods and algorithms to accurately compute the matrix eigenvalues This thorough analysis of semiseparable matrices explains their theoretical underpinnings and contains a wealth of information on implementing them in practice Many of the routines featured are coded in Matlab and can be downloaded from the Web for further exploration **Fault Detection and Diagnosis in Nonlinear Systems** Rafael Martinez-Guerra, Juan Luis Mata-Machuca, 2013-11-19 The high reliability required in industrial processes has created the necessity of detecting abnormal conditions called faults while processes are operating The term fault generically refers to any type of process degradation or degradation in equipment performance because of changes in the process's physical characteristics process inputs or environmental conditions This book is about the fundamentals of fault detection and diagnosis in a variety of nonlinear systems which are represented by ordinary differential equations The fault detection problem is approached from a differential algebraic viewpoint using residual generators based upon high gain nonlinear auxiliary systems observers A prominent role is played by the type of mathematical tools that will be used requiring knowledge of differential algebra and differential equations Specific theorems tailored to the needs of the problem solving procedures are developed and proved Applications to real world problems both with constant and time varying faults are made throughout the book and include electromechanical positioning systems the Continuous Stirred Tank Reactor CSTR bioreactor models and belt drive systems to name but a few H-infinity Control for Nonlinear Descriptor Systems

He-Sheng Wang, Chee-Fai Yung, Fan-Ren Chang, 2006-01-18 The authors present a study of the H_∞ control problem and related topics for descriptor systems described by a set of nonlinear differential algebraic equations They derive necessary and sufficient conditions for the existence of a controller solving the standard nonlinear H_∞ control problem considering both state and output feedback One such condition for the output feedback control problem to be solvable is obtained in terms of Hamilton Jacobi inequalities and a weak coupling condition a parameterization of output feedback controllers solving the problem is also provided All of these results are then specialized to the linear case The derivation of state space formulae for all controllers solving the standard H_∞ control problem for descriptor systems is proposed Among other important topics covered are balanced realization reduced order controller design and mixed H_2/H_∞ control H_∞ Control for Nonlinear Descriptor Systems provides a comprehensive introduction and easy access to advanced topics

Taqqu, 2012-12-06 This IMA Volume in Mathematics and its Applications NEW DIRECTIONS IN TIME SERIES ANALYSIS PART II is based on the proceedings of the IMA summer program New Directions in Time Series Analysis We are grateful to David Brillinger Peter Caines John Geweke Emanuel Parzen Murray Rosenblatt and Murad Taqqu for organizing the program and we hope that the remarkable excitement and enthusiasm of the participants in this interdisciplinary effort are communicated to the reader A vner Friedman Willard Miller Jr PREFACE Time Series Analysis is truly an interdisciplinary field because development of its theory and methods requires interaction between the diverse disciplines in which it is applied To harness its great potential strong interaction must be encouraged among the diverse community of statisticians and other scientists whose research involves the analysis of time series data This was the goal of the IMA Workshop on New Directions in Time Series Analysis The workshop was held July 2 July 27 1990 and was organized by a committee consisting of Emanuel Parzen chair David Brillinger Murray Rosenblatt Murad S Taqqu John Geweke and Peter Caines Constant guidance and encouragement was provided by Avner Friedman Director of the IMA and his very helpful and efficient staff The workshops were organized by weeks It may be of interest to record the themes that were announced in the IMA newsletter describing the workshop I

Nonlinear Observers and Applications Gildas Besançon, 2007-10-11 The purpose of this fantastically useful book is to lay out an overview on possible tools for state reconstruction in nonlinear systems Here basic observability notions and observer structures are recalled together with ingredients for advanced designs on this basis The problem of state reconstruction in dynamical systems known as observer problem is crucial for controlling or even merely monitoring processes For linear systems the theory has been well established for several years so this book attempts to tackle the problem for non linear systems Proceedings of the Berkeley-Ames Conference on Nonlinear Problems in Control and Fluid Dynamics Louis R. Hunt, Clyde Martin, 1984
