displays at various heights above the sea the ancient reefs and the underlying deposits of the Solomon Islands New Hebrides Fiji Tonga yet it is in its incomplete condition that Vanua Levu possesses its importance for the investigation of this subject This island has in fact been formed by the union of a number of smaller volcanic islands during a long protracted period of emergence These original islands are indicated approximately by the 1 800 feet contour level in the accompanying map There is however no reason for supposing that the movement of emergence has altogether ceased In the course of ages the extensive submarine plateau from which it rises will be laid bare and the small surrounding islands that are situated upon it such as Yanganga Kia Mali Rambli Kioa c will be included in the area of Vanua Levu
