

PROTECT YOUR HEAD

GET THE FACTS! Is your head protected?

MYTH:
Bike Helmets are safe for riding horses

While cycling helmets can look similar to some styles of riding helmets, they're not built to the same design and safety standards as equestrian helmets.

Equestrian helmets are rigorously tested to protect against riding specific accidents, and offer added protection to specific areas, such as the back of the head.

FACT:
Helmets should always be replaced after a fall

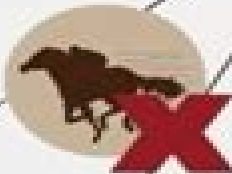

If your helmet takes any impact after a fall, regardless of how hard, it should be replaced.

Just because there is no visible crack or break does not mean that the impact from your fall didn't cause an invisible defect that could result in less protection if you fall again.

FACT:
Never buy a used helmet

Copy here from Open.

MYTH:
Speed increases risk of injury

While the speed you're traveling while riding is a factor, the risk of injury is much more significantly impacted by your distance away from the ground.

No matter what speed you're going, a fall from over 2 feet above the ground can cause severe injury.

FACT:
Head injuries are cumulative

The more hits your head takes, the worse it is.

Research has shown that a head injury can be made significantly worse if you have a history of similar injuries.

Multiple concussions can be long-term damage to the brain.

MYTH:
More expensive helmets are safer

All ASTM/SEI certified helmets go through the same approval process. Higher priced helmets may give you more padding options, different materials, and alternate styles, but they will provide the same level of safety as other certified helmets.

FACT:
All riding helmets should be ASTM/SEI approved

A properly fitting ASTM/SEI approved helmet can prevent death and significantly reduce the severity of injury sustained due to a riding fall or head impact.

Helmets that carry an ASTM/SEI certification have passed through testing to prove that their design is safe, and will minimize or prevent riding related injury.

FACT:
Fit is EVERYTHING!

Not only is it important that your helmet is approved, but it needs to fit properly to be effective.

A helmet must be firm but comfortable, should not easily shift forward or back, and the chin strap should be snug. A properly adjusted strap should sit against the chin directly below the ear.
