Rings Fields And Vector Spaces An Introduction To Abstract Algebra Via Geometric Constructibility:

Rings, Fields, and Vector Spaces B.A. Sethuraman, 2013-04-09 This book is an attempt to communicate to undergraduate mathematics majors my enjoyment of abstract algebra. It grew out of a course offered at California State University Northridge in our teacher preparation program titled Foundations of Algebra that was intended to provide an advanced perspective on high school mathematics. When I first prepared to teach this course I needed to select a set of topics to cover. The material that I selected would clearly have to have some bearing on school level mathematics but at the same time would have to be substantial enough for a university level course. It would have to be something that would give the students a perspective into abstract mathematics, a feel for the conceptual elegance and grand simplifications brought about by the study of structure. It would have to be of a kind that would enable the students to develop their creative powers and their reasoning abilities. And of course it would all have to fit into a sixteen week semester. The choice to me was clear: we should study constructibility. The mathematics that leads to the proof of the nontrisectibility of an arbitrary angle is beautiful; it is accessible and it is worthwhile. Every teacher of mathematics would profit from knowing it. Now that I had decided on the topic I had to decide on how to develop it. All the students in my course had taken an earlier course.

Rings, Fields, and Vector Spaces B. A. Sethuraman, 1996-11-26 **Rings, Fields, and Vector Spaces** B.A. Sethuraman, 1997-12-10 Using the proof of the nontrisectibility of an arbitrary angle as a final goal, the author develops in an easy conversational style the basics of rings, fields, and vector spaces. Originally developed as a text for an introduction to algebra course for future high school teachers at California State University Northridge, the focus of this book is on exposition. It would serve extremely well as a focused one semester introduction to abstract algebra.

Intelligent Computer Mathematics Florian Rabe, William M. Farmer, Grant O. Passmore, Abdou Youssef, 2018-08-02 This book constitutes the refereed proceedings of the 11th International Conference on Intelligent Computer Mathematics CICM 2018 held in Hagenberg Austria in August 2018. The 23 full papers presented were carefully reviewed and selected from a total of 36 submissions. The papers focus on the Calculus, Digital Mathematics Libraries, and Mathematical Knowledge Management tracks which also correspond to the subject areas of the predecessor meetings. Orthogonally, the Systems and Projects track called for descriptions of digital resources such as data and systems and of projects, whether old, current, or new, and survey papers covering any topics of relevance to the CICM community.
