Rings, Modules, Algebras, and Abelian Groups Alberto Facchini, Evan Houston, Luigi Salce, 2004-01-28 Rings Modules Algebras and Abelian Groups summarizes the proceedings of a recent algebraic conference held at Venice International University in Italy Surveying the most influential developments in the field this reference reviews the latest research on Abelian groups algebras and their representations module and ring theory and topological algebraic structures and provides more than 600 current references and 570 display equations for further exploration of the topic It provides stimulating discussions from world renowned names including Laszlo Fuchs Robert Gilmer Saharon Shelah Daniel Simson and Richard Swan to celebrate 40 years of study on cumulative rings Describing emerging theories *Abelian Groups, Rings and Modules* Andrei V. Kelarev, 2001 This volume presents the proceedings from the conference on Abelian Groups Rings and Modules AGRAM held at the University of Western Australia Perth Included are articles based on talks given at the conference as well as a few specially invited papers The proceedings were dedicated to Professor L szl Fuchs The book includes a tribute and a review of his work by his long time collaborator Professor Luigi Salce Four surveys from leading experts follow Professor Salce s article They present recent results from active research areas **Approximations and Endomorphism Algebras of Modules** Rüdiger Göbel, Jan Trlifaj, 2012-10-01 This second revised and substantially extended edition of Approximations and Endomorphism Algebras of Modules reflects both the depth and the width of recent developments in the area since the first edition appeared in 2006 The new division of the monograph into two volumes roughly corresponds to its two central topics approximation theory Volume 1 and realization theorems for modules Volume 2 It is a widely accepted fact that the category of all modules over a general associative ring is too complex to admit classification Unless the ring is of finite representation type we must limit attempts at classification to some restricted subcategories of modules The wild character of the category of all modules or of one of its subcategories C is often indicated by the presence of a realization theorem that is by the fact that any reasonable algebra is isomorphic to the endomorphism algebra of a module from C This results in the existence of pathological direct sum decompositions and these are generally viewed as obstacles to classification In order to overcome this problem the approximation theory of modules has been developed The idea here is to select suitable subcategories C whose modules can be classified and then to approximate arbitrary modules by those from C These approximations are neither unique nor functorial in general but there is a rich supply available appropriate to the requirements of various particular applications The authors bring the two theories together The first volume Approximations sets the scene in Part I by introducing the main classes of modules relevant here the S complete pure injective Mittag Leffler and slender modules Parts II and III of the first volume develop the key methods of approximation theory Some of the recent applications to the structure of modules are also presented here notably for tilting cotilting Baer and Mittag Leffler modules In the second volume Predictions further basic instruments are introduced the prediction principles and their applications to proving realization theorems Moreover tools are developed there for

answering problems motivated in algebraic topology The authors concentrate on the impossibility of classification for modules over general rings The wild character of many categories $\mathcal{C}$ of modules is documented here by the realization theorems that represent critical R algebras over commutative rings R as endomorphism algebras of modules from $\mathcal{C}$ The monograph starts from basic facts and gradually develops the theory towards its present frontiers It is suitable both for graduate students interested in algebra and for experts in module and representation theory

Rings, Modules, and the Total Friedrich Kasch, Adolf Mader, 2004-06-25 Accessible to anyone with a basic knowledge of ring and module theory A short introduction to torsion free Abelian groups is included

Modules over Discrete Valuation Rings Piotr A. Krylov, Askar A. Tuganbaev, 2018-09-24 This book provides the first systematic treatment of modules over discrete valuation domains which play an important role in various areas of algebra especially in commutative algebra Many important results representing the state of the art are presented in the text along with interesting open problems This updated edition presents new approaches on p -adic integers and modules and on the determinability of a module by its automorphism group Contents Preliminaries Basic facts Endomorphism rings of divisible and complete modules Representation of rings by endomorphism rings Torsion free modules Mixed modules Determinability of modules by their endomorphism rings Modules with many endomorphisms or automorphisms
