Recursion and Human Language Harry van der Hulst, 2010-03-26 The present volume is an edited collection of original contributions which all deal with the issue of recursion in human language's All contributions originate as papers that were presented at a conference on the topic of recursion in human language organized by Dan Everett in March 22 2007 For the purpose of this collection all articles underwent a double blind peer review process The present chapters were written in the course of 2008 Although the recursive nature of linguistic expressions i.e. the apparent possibility of producing an infinite number of expressions with finite means has been noted for a long time no general agreement seems to exist concerning the empirical status as well as mathematical formalization of this characteristic of

human languages or of the grammars that lie behind these utterances that make up these languages. Renewed interest in this subject was sparked by recent claims that recursion is perhaps the sole uniquely human and as such universal trait of human language (cf Chomsky, Hauser and Fitch 2000). In this volume the issue of recursion is tackled from a variety of angles. Some articles cover formal issues regarding the proper characterization or definition of recursion while others focus on empirical issues by examining the kinds of structure in languages that suggest recursive mechanism in the grammar. Most articles discuss syntactic phenomena but several involve morphology, the lexicon and phonology. In addition we find discussions that involve evolutionary notions and language disorders and the broader cognitive context of recursion.

Language Typology

Alice Caffarel, J.R. Martin, Christian M.I.M. Matthiessen, 2004-12-23. This book is intended as a systemic functional contribution to language typology both for those who would like to understand and describe particular languages against the background of generalizations about a wide range of languages and also for those who would like to develop typological accounts that are based on and embody descriptions of the systems of particular languages rather than isolated constructions. The book is a unique contribution in at least two respects. On the one hand it is the first book based on systemic functional theory that is specifically concerned with language typology. On the other hand the book combines the particular with the general in the description of languages: it presents comparable sketches of particular languages while at the same time identifying generalizations based on the languages described here as well as on other languages. The volume explores eight languages covering seven language families: French, German, Pitjantjatjara, Tagalog, Telugu, Vietnamese, Chinese and Japanese.

The Development of Language Geoff Williams, Annabelle Lukin, 2006-03-22. This book presents a unique range of interdisciplinary work on questions of language development and evolution. It makes visible the significant contribution which meaning oriented linguistics is making to debates about the origins of language from the perspective of language evolution in the species as well as language development in the child. As well as linguistics in the systemic functional or Hallidayan tradition, the book offers contributions from primatology, psychiatry, sociology and education.
